

LEARN TO WORK

- 1.Product System Design
- 2.UI / UX Design

When people are looking for a job, they are always troubled by not being able to find a suitable job because their professional skills are too simple. The project solves the problem of unclear requirements for future jobs for graduates. The purpose is to let people label and understand the job requirements, master the relevant skills, and finally complete the job employment.

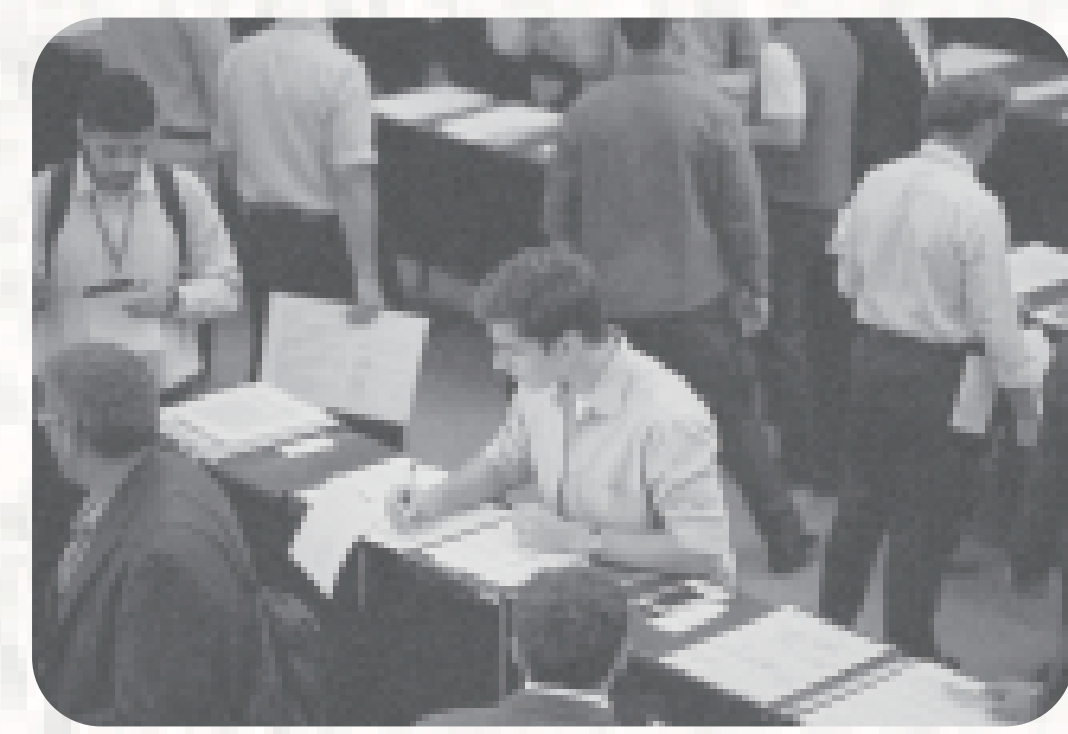

INSPIRATION

Two story editors

Story 1: Students who learn pure painting can only be art teachers.

Dilemma :

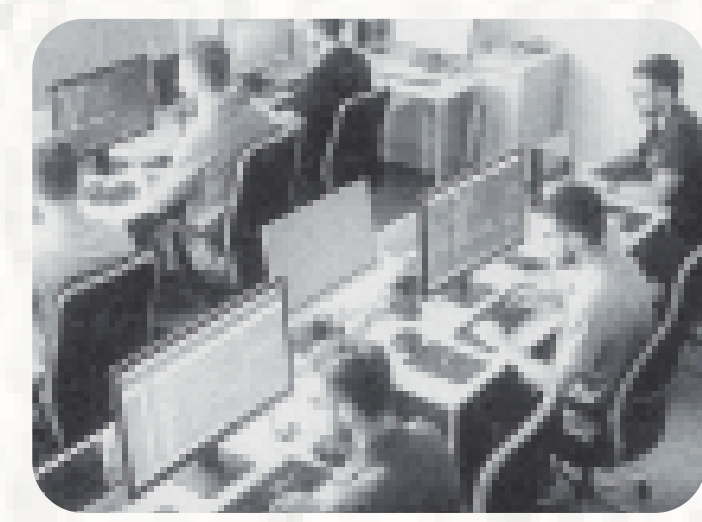

- 1. Technically, there are not many computer functions.
- 2. Teachers are under great competitive pressure.
- 3. You can only learn other professional skills to become full-time
- 4. Quit your education and become a salesman or waitress

Story2: My undergraduate computer programming students around me have been admitted to graduate school, but they still can't find suitable positions.

Dilemma :

- 1. My learning experience is not aesthetically pleasing
- 2. There are some bonus points for not being able to complete the project on time.
- 3. There is no proper teaching method to learn and improve the problem

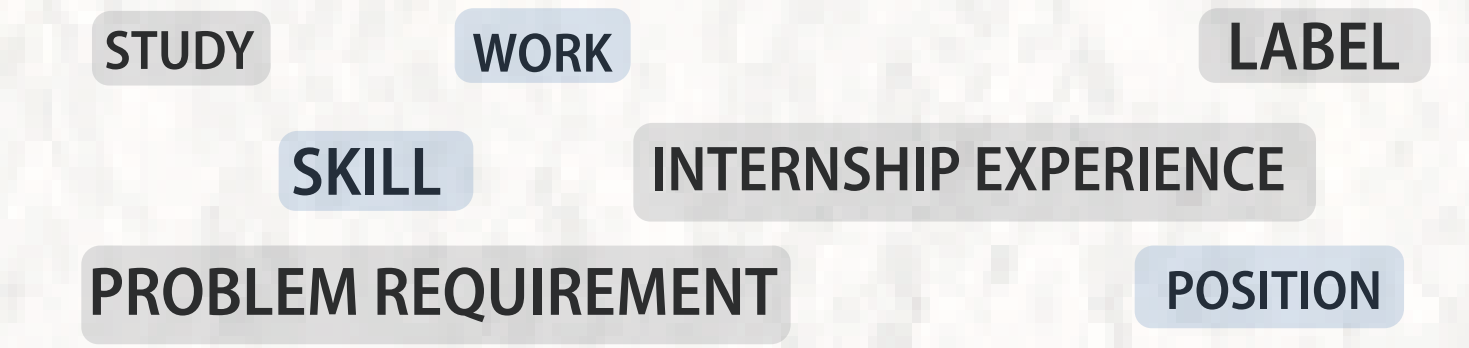

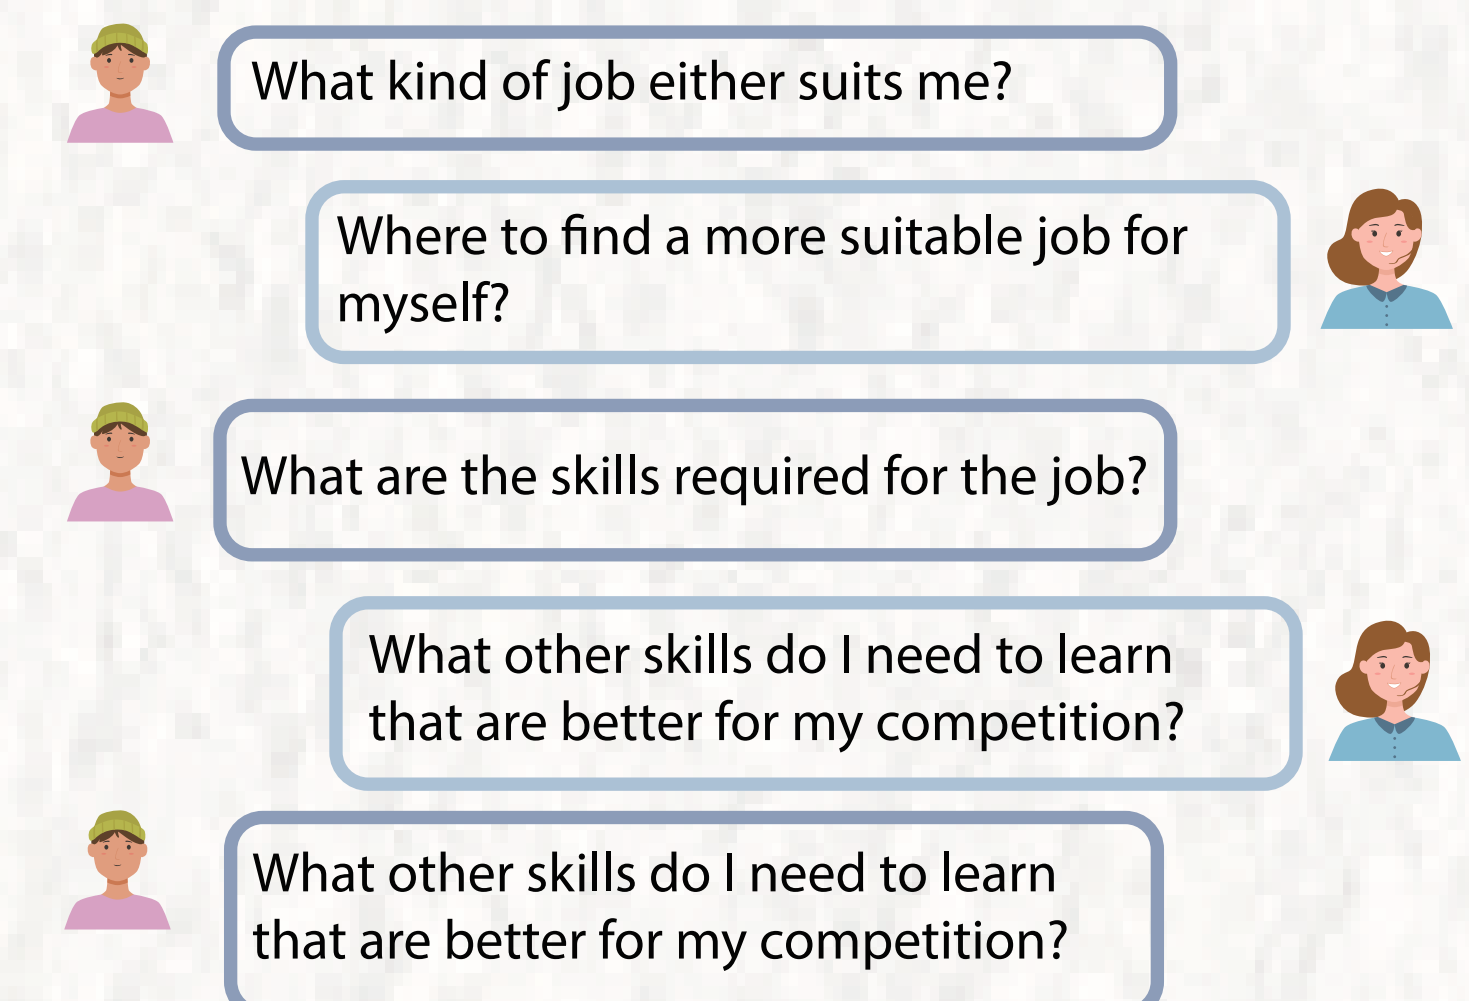

Summary

Chinese society has produced countless graduates and many problems and contradictions. How can we balance this problem? How do people know what skills they need to learn to give them a competitive edge?

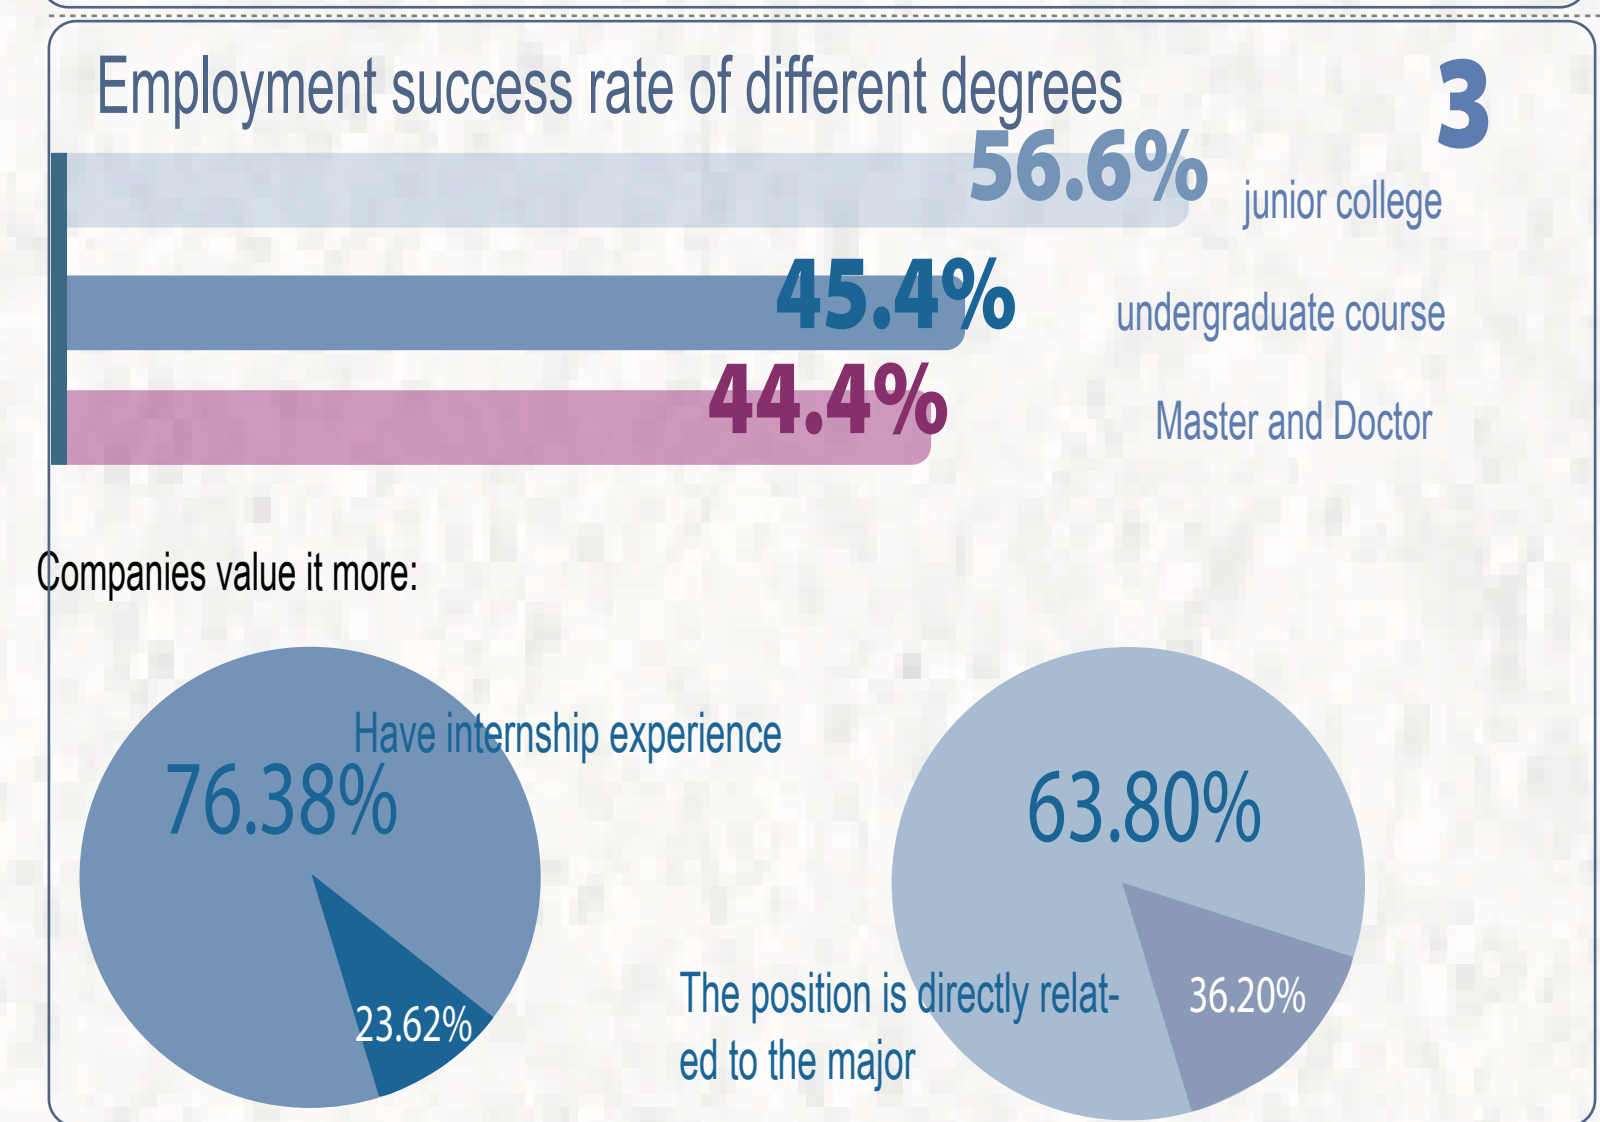

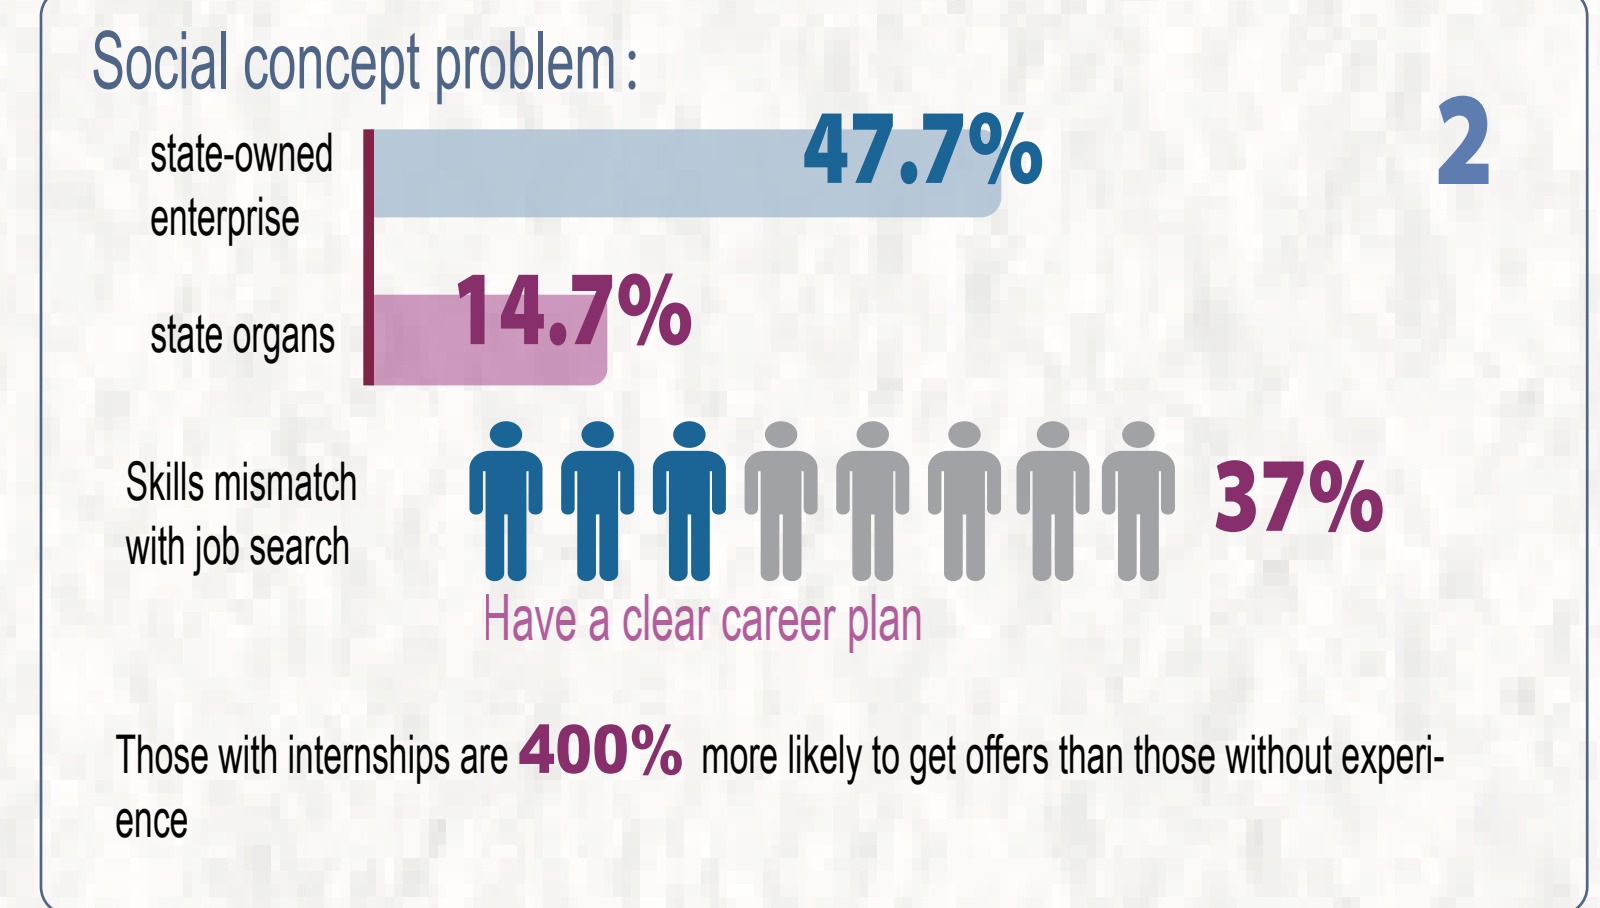

BACKGROUND

Under the influence of China's educational environment, their professional ability is single or it does not match the social needs, leading to the lack of employment or the lack of competitive pressure.

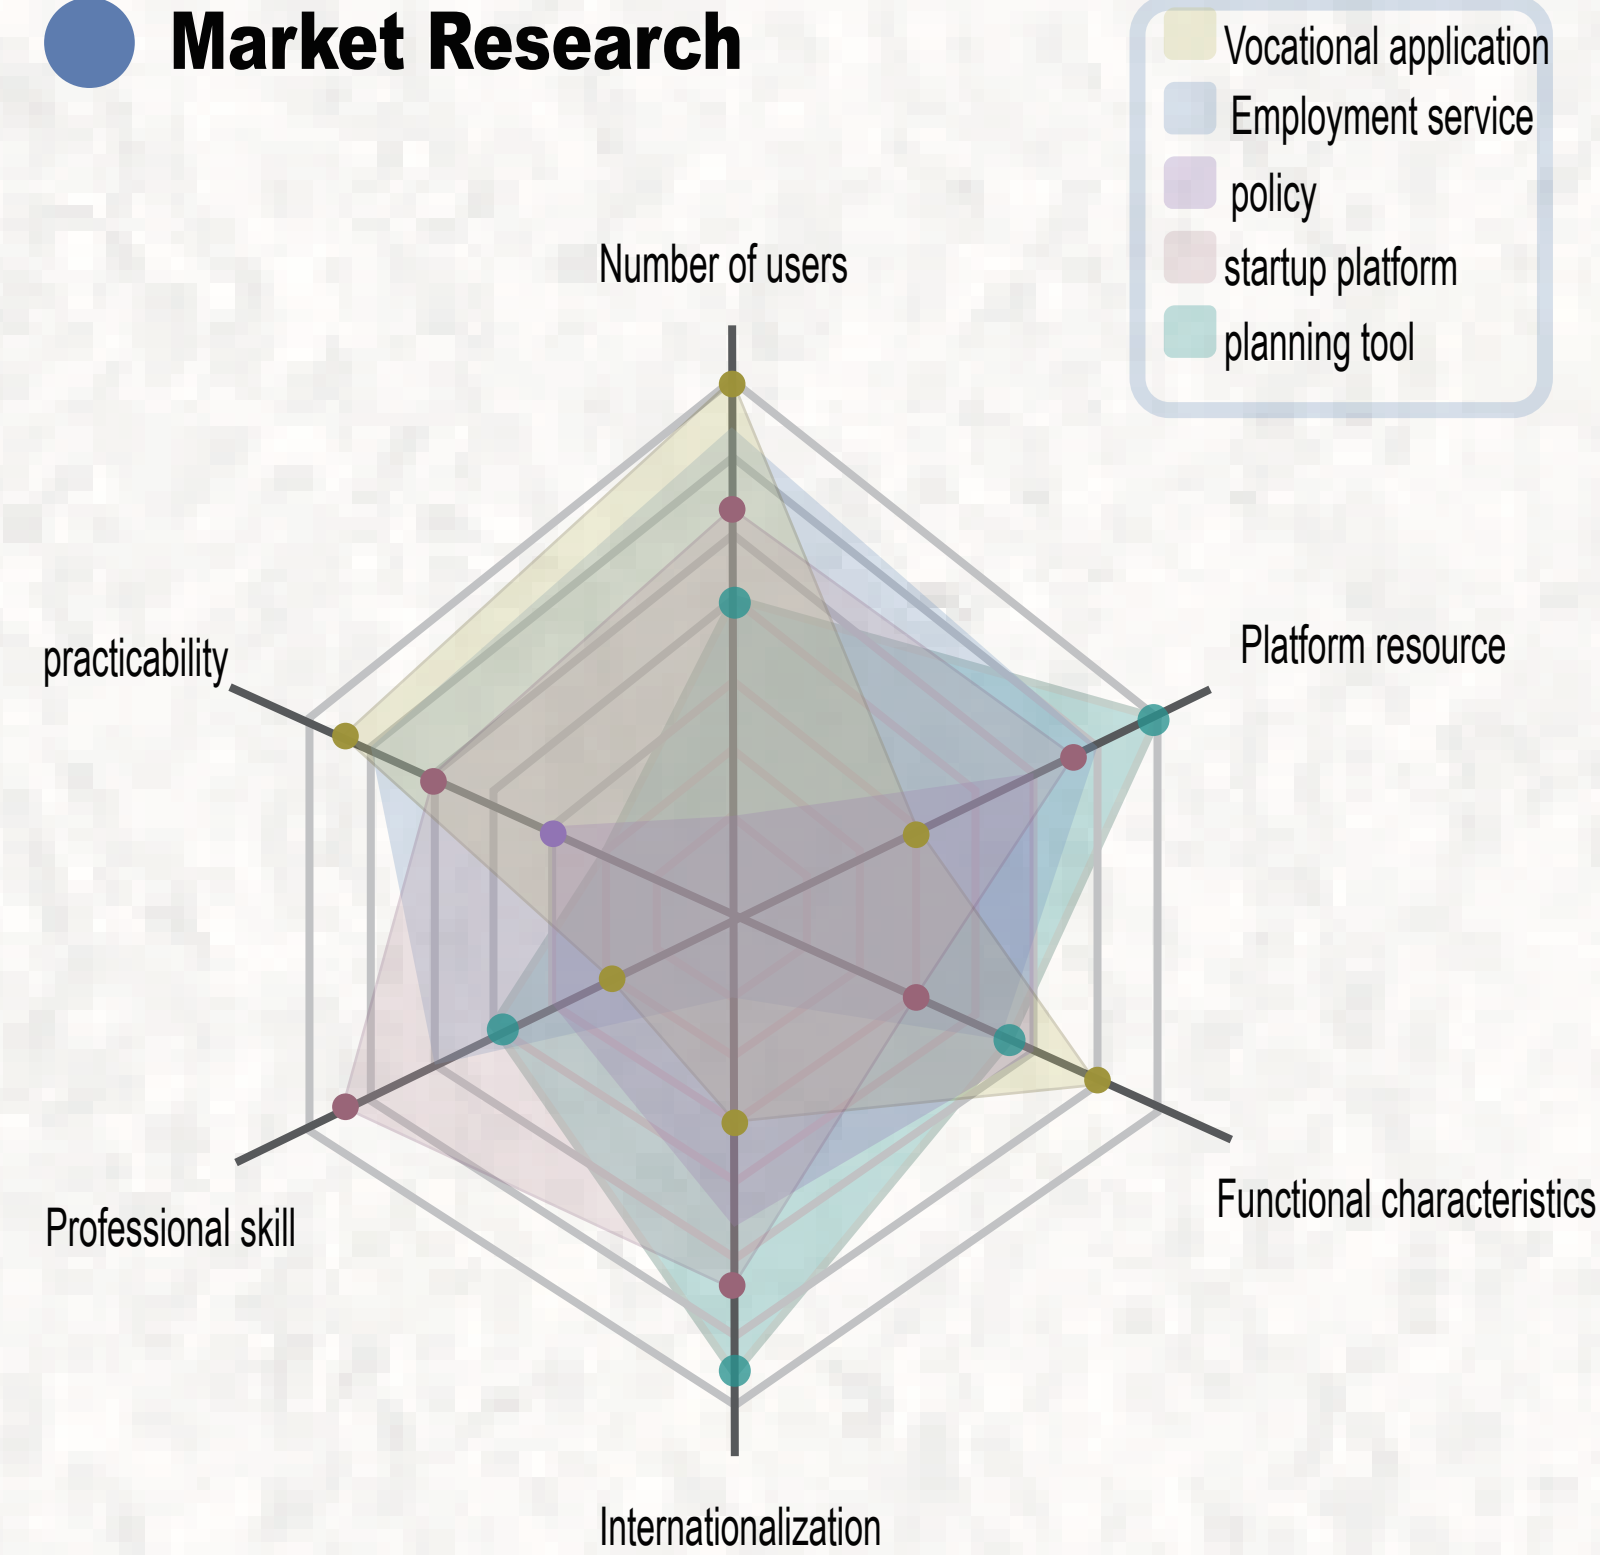

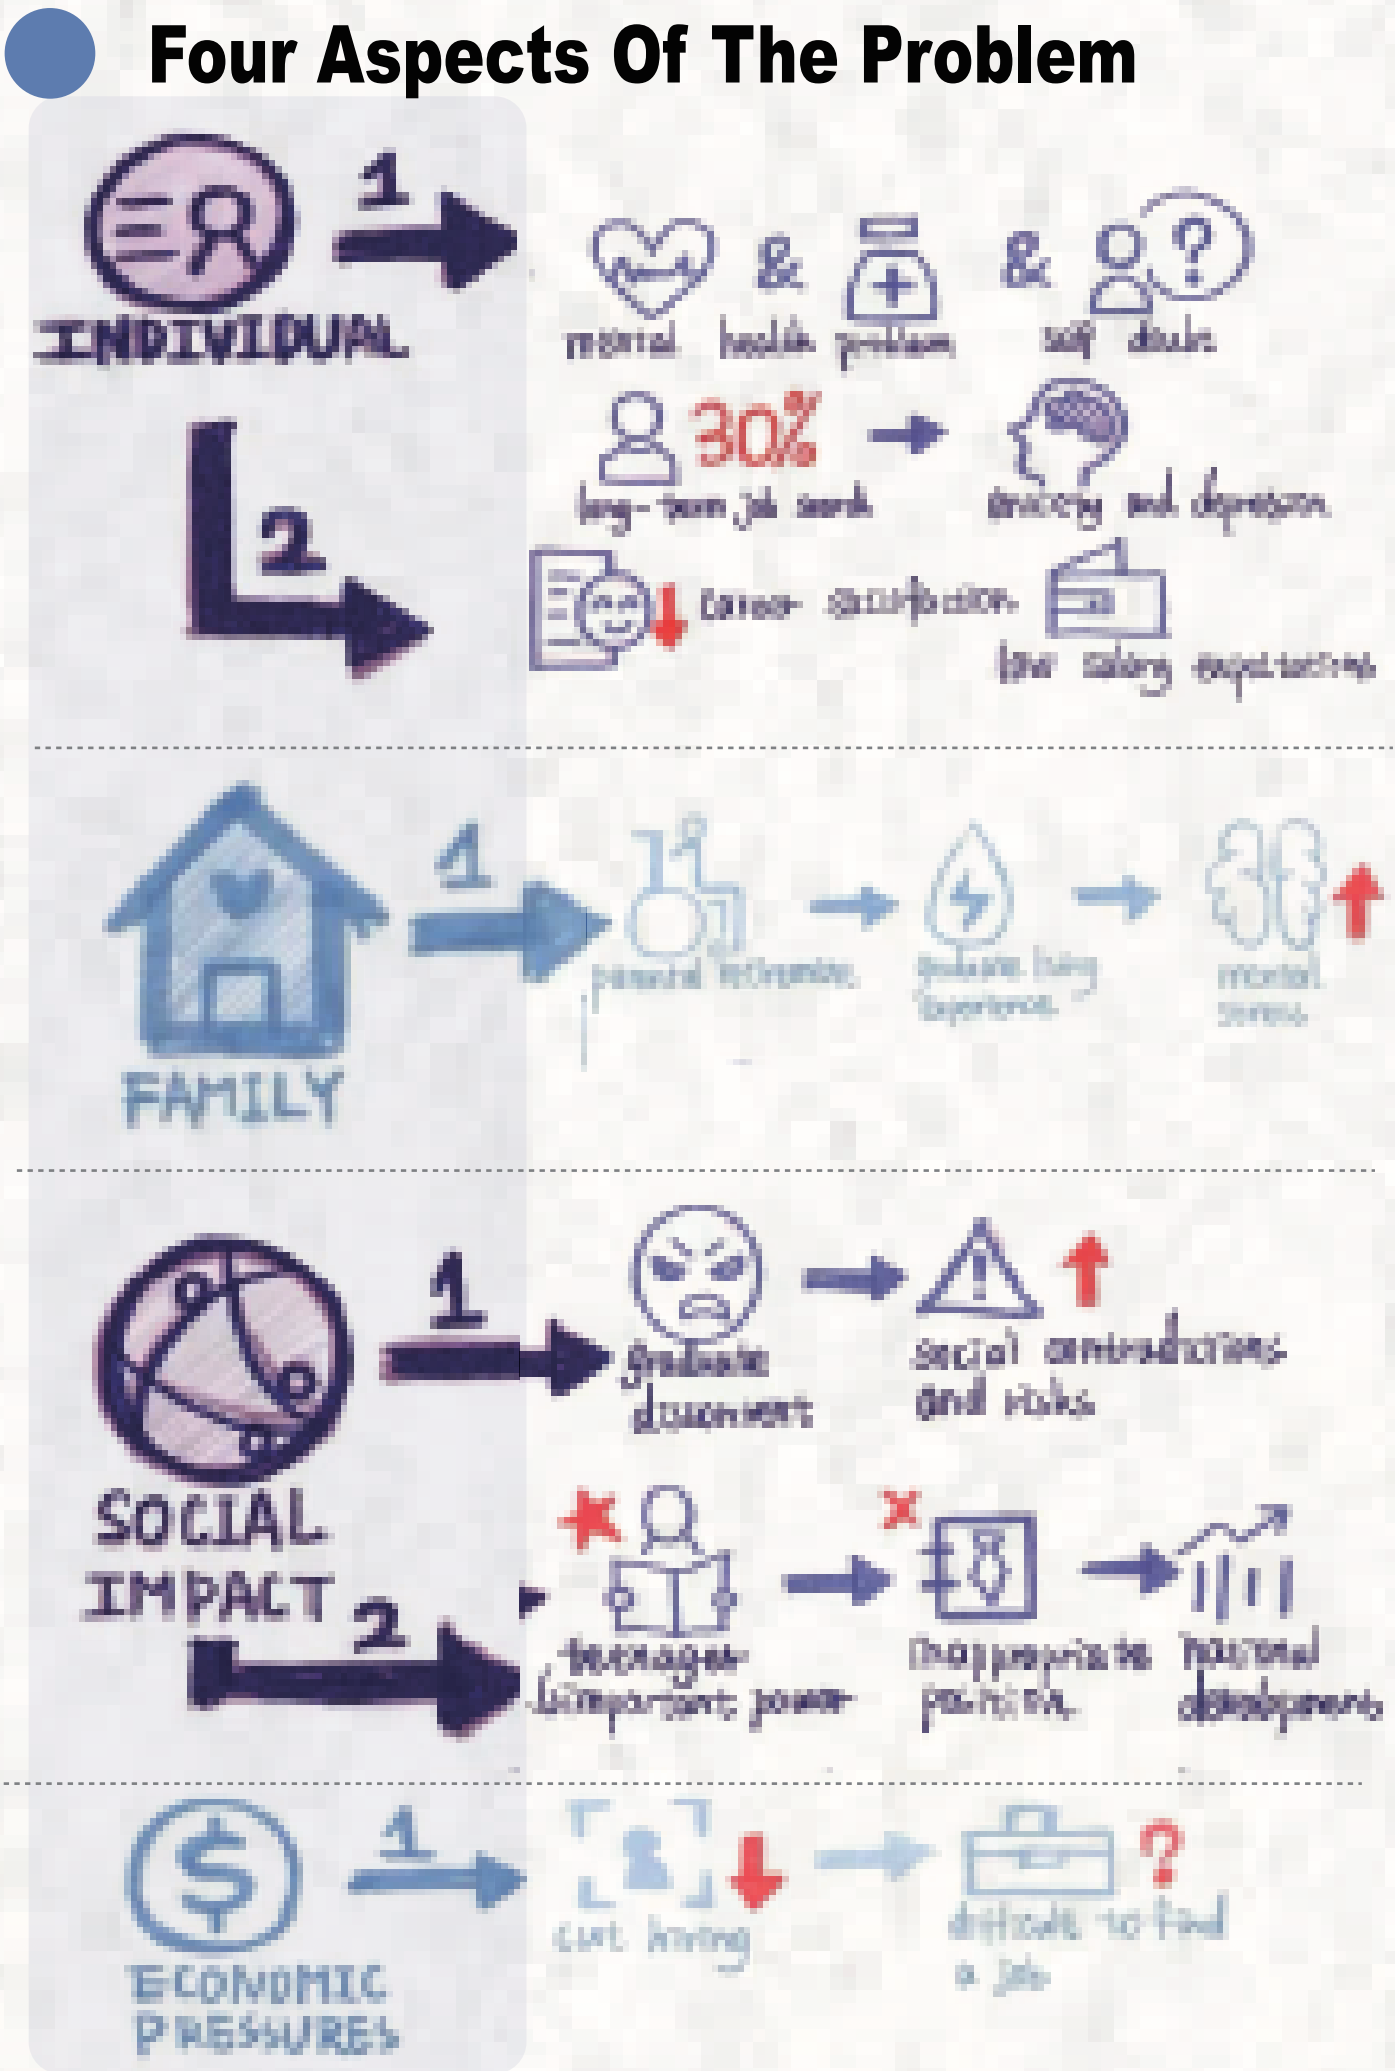

RESEARCH

The Current Situation Of Social Employment In China: — Education saturation / talent market allocation problem

Insight 1

The number of applicants is on the rise, job requirements are increasing, and students themselves are not fully equipped with job requirements, so they can not be directly employed.

Summary

In general, because of the **lack of skills**, the job search process is full of **uncertainty**, personal emotions also affect the family. **Social needs** are on the rise, and it takes time to develop learning **skills** that affect the stability of the overall society. Therefore, it is particularly important to identify the skills you need in advance.

USER INTERVIEW

Interview

How is the market demand?

There is a lot of demand. Students all have skills but the level of skills acquired is not enough to support the needs of the future job.

Do you have any plans for the future?

Job-hopping, now is China Mobile outsourcing post, there is a month of training, but if you master the ability before training will be more competitive advantage.

Why did you change your job?

1.Because of the salary. 2. Promotion space problem: The leader will choose his own confidant rather than himself.

Are companies hiring with the skills they need?

Of course, as the company prefers professional students or social personnel to interview positions, if you have internship experience will be more preferred objects.

Is it more competitive for well-rounded talent?

Comprehensive talents are more able to solve multi-dimensional problems, but they can also be found for not meeting their personal needs, thus unable to achieve long-term employment.

Are you willing to provide training during the student learning phase?

Teaching and professional training can be carried out in advance, so that students can directly enter the post to work after graduation. Companies are more willing to recruit people directly.

Insight 2

People don't know where they stand

Today's do not know what their future job needs are, and nearly half of what they learn cannot be applied to their future jobs. The gap between education and future work is relatively large.

Insight 3

Job requirements are not transparent

It is also vague and not clear enough to understand the job demand. This requires students to practice, learn and master the skills needed for future work to enrich themselves.

Persona

45 years old

4S shop manager + Car sales

Demand: Looking to hire experienced, long-term employees with a diverse set of skills

Pain point: Can't find the right talent to match

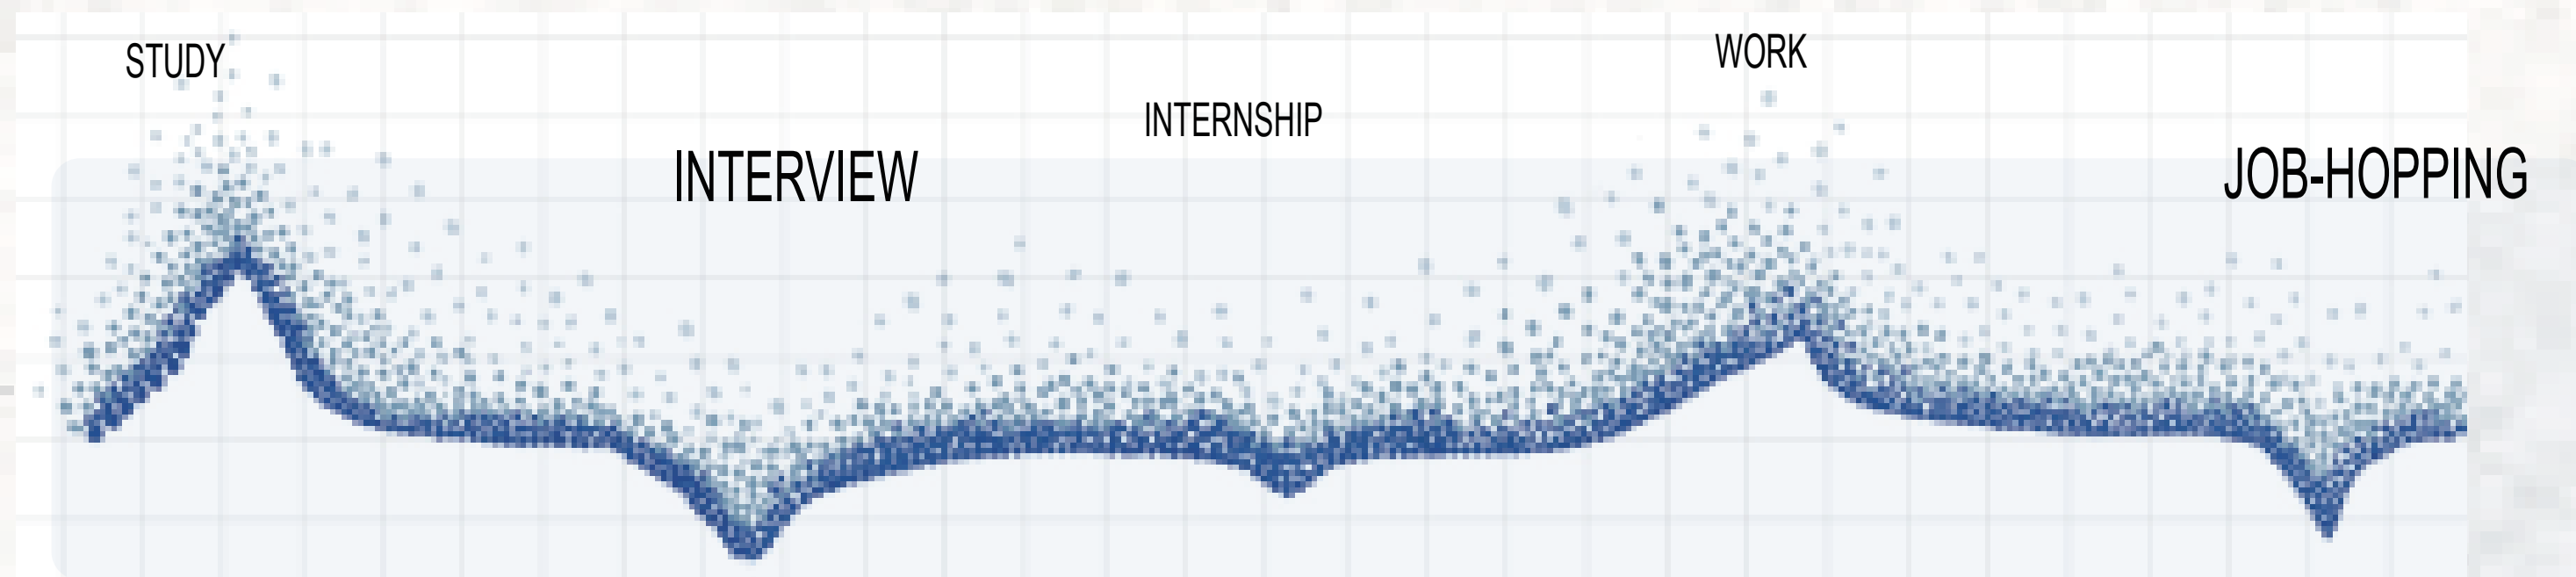

User Journey Maps

Happiest

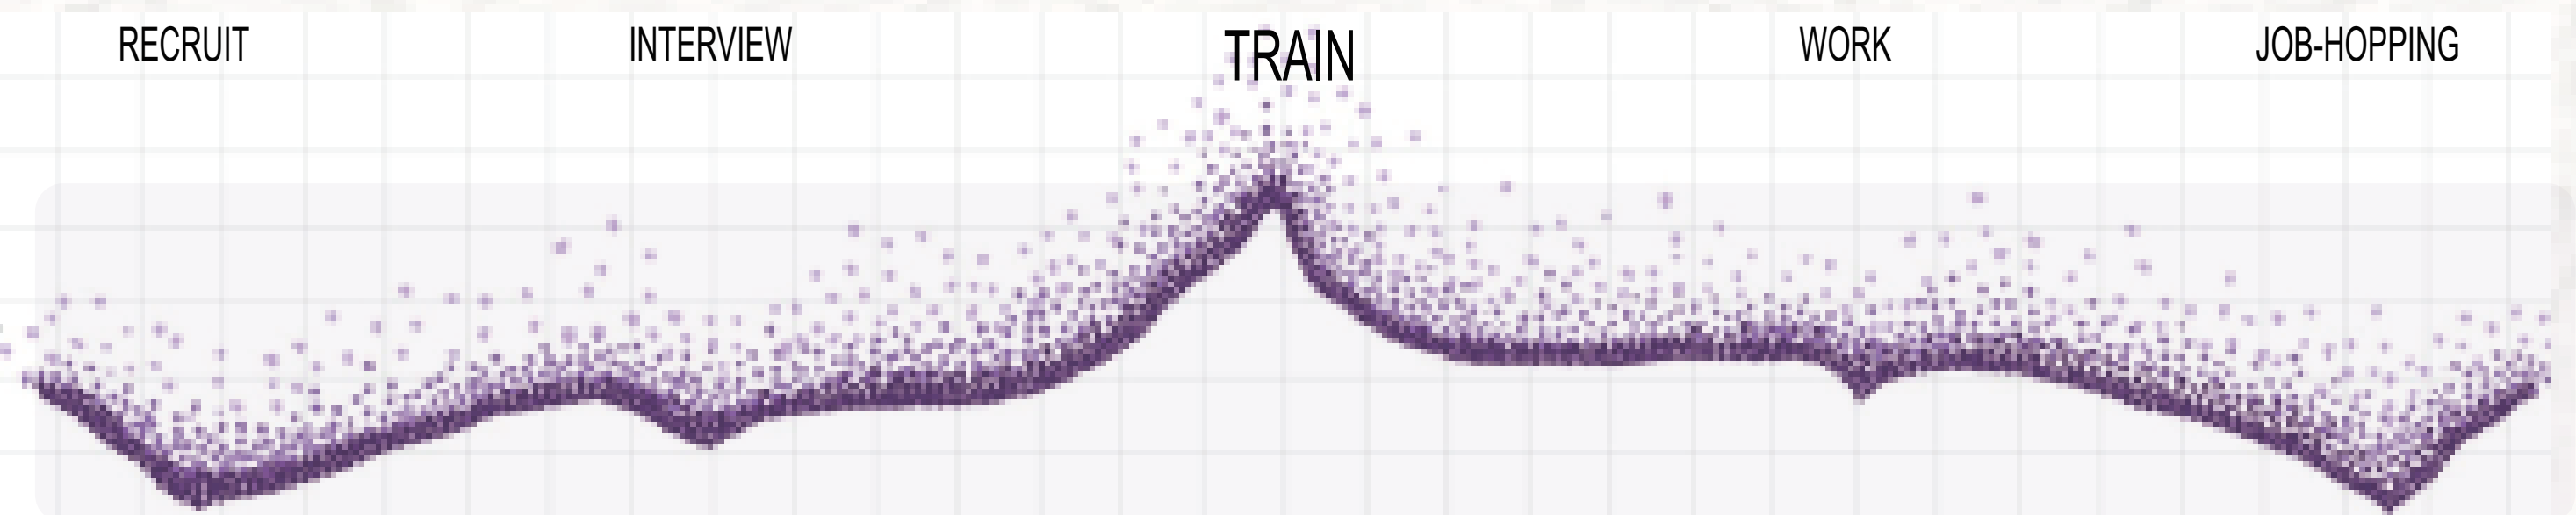

Unpleasant

Happiest

Unpleasant

Three Pain Points

1. Students have no training opportunities before working.
2. There is little market demand for students' majors.
3. The company's job Posting requirements are not transparent.
4. Students' own skills are not in place.
5. Getting knocked down by rejection at every interview leads to loss of confidence and motivation.
6. Limitations of personal cognition.
7. Unknown professional needs for the job
8. The goal of learning new skills is not clear enough
9. Inability to insist on learning independently, and needs encouragement
10. Unfamiliar with the job environment

Lack of awareness of personal career planning

1

Lack of a systematic, comprehensive integration platform

2

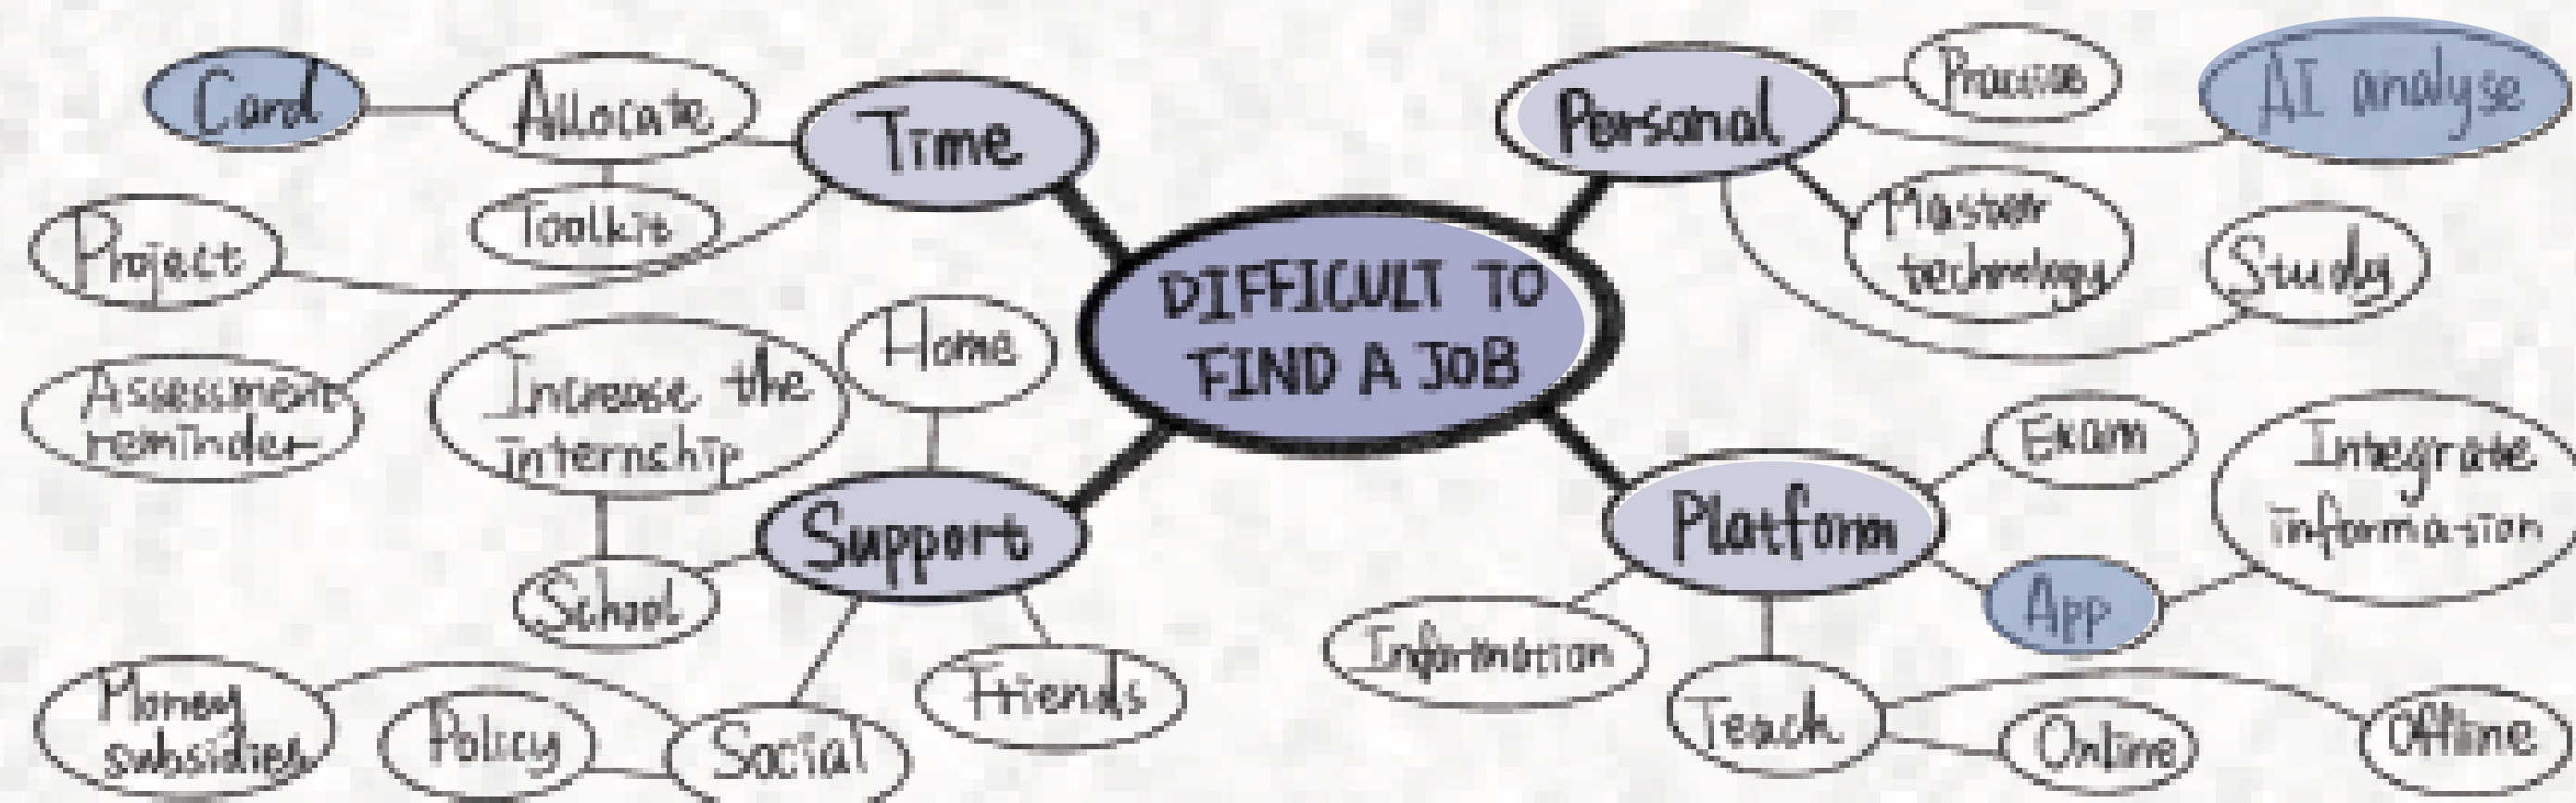

Improper time allocation, lack of support

3

HOW MIGHT WE

1. Provide users with future career planning in the learning stage, and users can find the professional knowledge they need to master before working.
2. Provide the professional knowledge that enterprises need to master, and label the learning content intuitively.
3. Allocate time wisely during the learning phase and provide some support and encouragement.

Brain Storming

DESIGN CONCEPT

Learn To Work

WHO: College students near graduation

HOW:

1. Find the positioning, analyze the suitability for the job, and provide the skill requirements
2. Label the expertise required by the enterprise

Toolkit

- Give daily encouragement
- Keep track of your daily tasks
- Recycled cards
- Interaction with online apps

App devices

- Labeling
- Analyze and present professional skills
- Assign daily tasks

WHAT: Analyze the suitable job position. Learn the required professional knowledge. Allocate time reasonably during the learning phase and provide some support and encouragement.

PURPOSE: Let students find their own skills and identify the skills required for the job. Assign daily learning content. Motivate students to learn.

Stay informed about the news with VR

OVERVIEW

This is about the world of VR, using VR to introduce news to people. In today's ways of obtaining resources, information fragmentation has become a very common term. While people use fragmented time to obtain more information, they ignore the authenticity and comprehensiveness of the information. Therefore, it is crucial to find reasonable ways to access resources and make knowledge available.

TOOL:

TARGET PLATFORM: VR

PROJECT DURATION: 2025.10---2025.11

GUO YIBO

Virtual Reality

BACKGROUND

01 Key Inspiration:

In today's access to resources, information fragmentation has become a very common term. People use fragmented time to get more information, while ignoring the authenticity and comprehensiveness of the information. Therefore, it is important to find the right way to access resources and keep people knowledgeable.

Information Title Party

The title of the news event "Hammer's New Product Launch", Luo Yonghao, as a famous actor, began to run some projects about the invention of mobile phones, because the network editors want to push attractively, so that the information becomes fragmented.

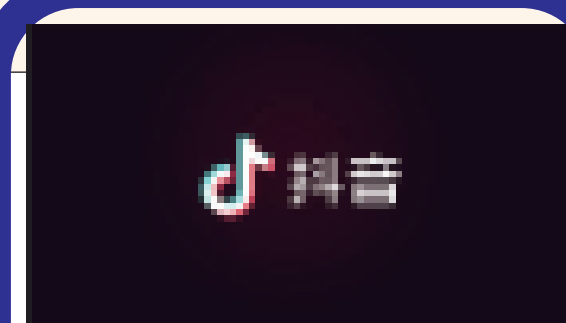

Medium-length videos are starting to reach new heights

Station B is now 100 UP masters, all of whom use medium and long videos as the main means of video cropping. This not only reflects the increase in users' demand for in-depth content, but also makes Bilibili stand out in the fiercely competitive content market, and improves the user's stickiness to the platform.

Short video information is out of focus

In the news on Douyin about the "urban traffic transformation", some accounts only filmed the chaos at the construction site, with workers digging many holes on the road and blocking vehicles. The caption of the video is "'City Name' Traffic Transformation, the more it changes, the more chaotic it becomes". Misunderstand the audience and cause the news to lose focus.

Conclusion:

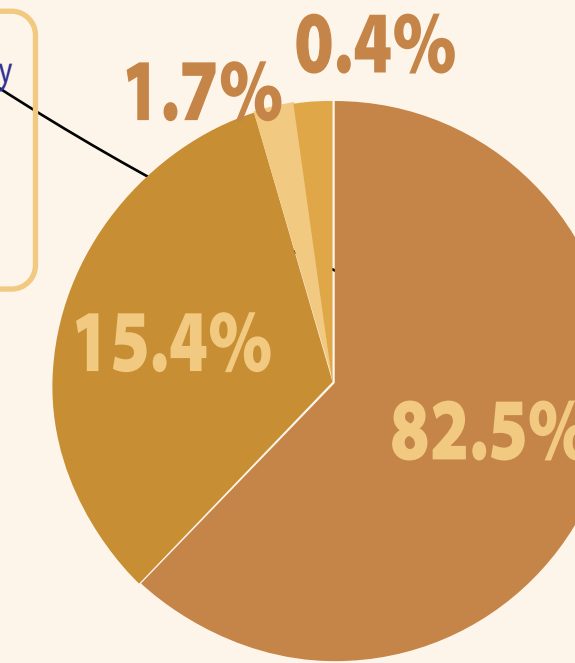

The fragmented knowledge of information affects people's judgment, and some netizens have begun to transform to complete deep content learning. Whether it can completely display the fragmented information content and provide people with ideas for integrating information has become a major solution to the real problem.

RESEARCH

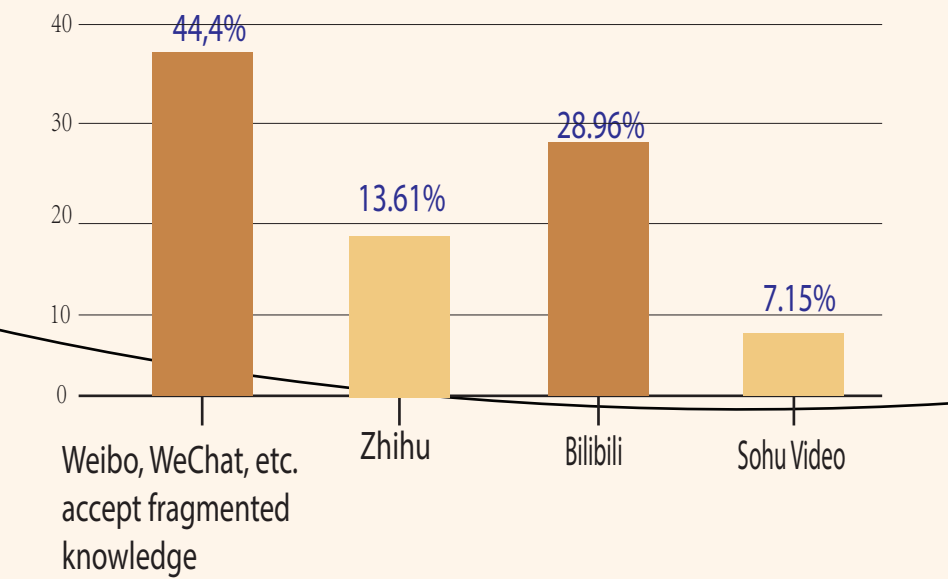

Frequency Of Use Of Social Media And Short-form Video Platforms:

The frequency of people using short videos under the number of people in big data

82.5% used short videos regularly
15.4% used occasionally
1.7% rarely used
0.4% never used them

Online platforms: A survey by China Youth Daily shows that netizens use online platforms to accept fragmented content.

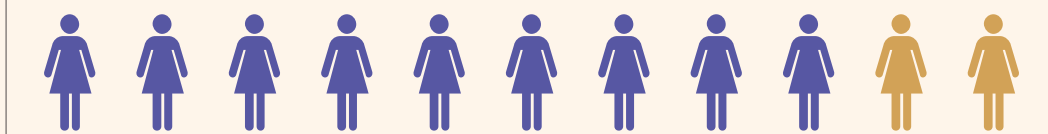

There are about **1.1 billion** netizens in China, and short video users account for **95.5%** of the total number of netizens

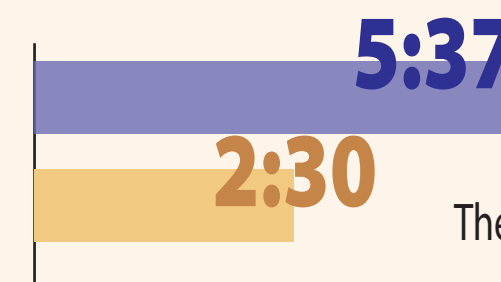

95.5% Short-form video users

Bilibili occupies an important position by watching long videos to gain knowledge, and about **200 million** users learn knowledge at Bilibili.

Short video usage duration: long video duration **9: 2**

The average amount of time people spend online in the community

Average time spent online

The amount of time you watch a short video per day

Impact:

13.8% of the respondents believe that fragmented reading loses cultural significance

49.6% of the respondents believe that fragmented reading cannot form a complete and logical knowledge system

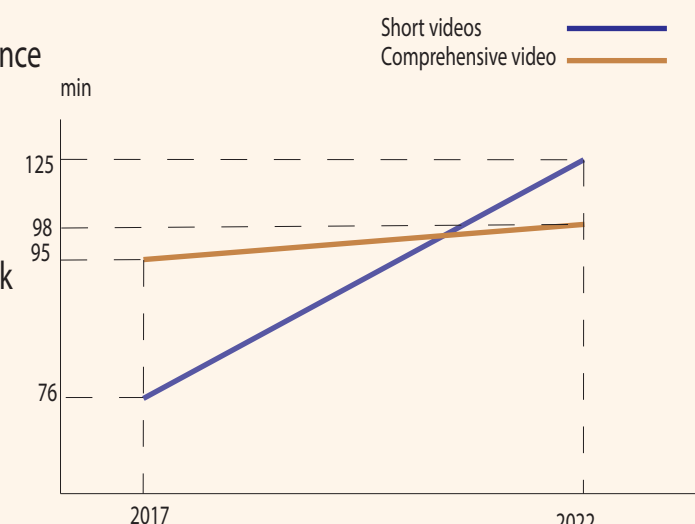

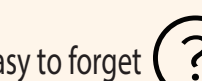

49.2% of the respondents believe that fragmented reading weakens their ability to think

38.6% of respondents believe that fragmented reading makes people stop reading in depth

37.3% of the respondents believe that fragmented reading is easy to forget

31.2% of the respondents believe that fragmented reading is easily controlled by emotions

Insight 1

People prefer a fast-paced lifestyle and have more diverse ways to get news, but it is this fragmentation that causes people to know that the news is one-sided and incomplete

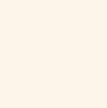

Four Aspects Of The Problem

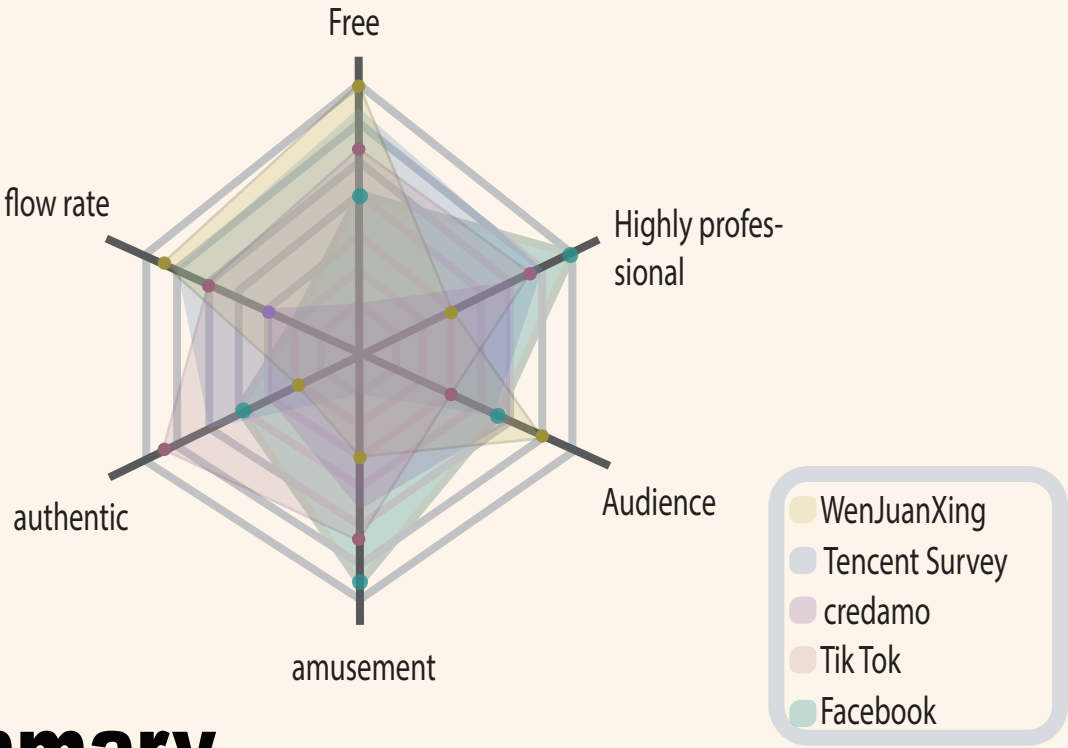

Cause

- The fragmentation of information dissemination caused by the fragmentation of social classes
- Fragmented writing spawned by the characteristics of Internet media
- The fragmented reading needs established by the unconscious impetuosity of Internet beings

Market Research

Advantages	Disadvantages
 Free, easy to operate, basic charts are automatically generated, and basic data analysis is free	questionnaire logic is single, the sample data quality is uneven, and advanced functional analysis requires payment
 Free, simple to distribute, relatively complete functions, basic icons are automatically generated	Online analytics are limited, data quality and validity are difficult to guarantee, and prices are expensive
 Comprehensive functions, high-quality data, flexible research design	Fees may apply, possible user restrictions
 Fast updates, large traffic, entertainment-oriented, and free	Too fragmented, quick browsing cannot be remembered, low threshold

Summary

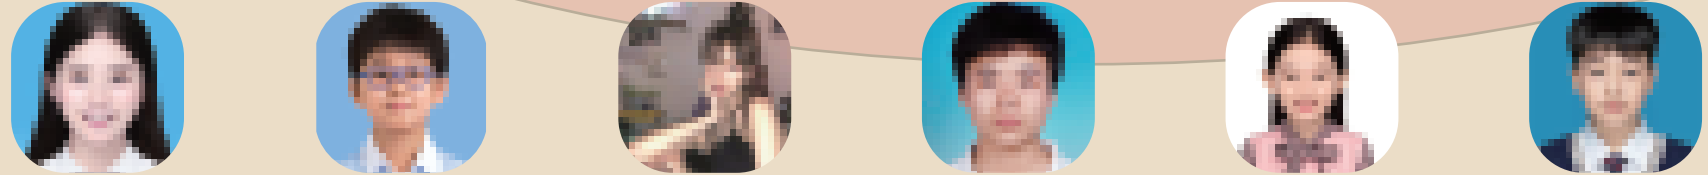

Most of the existing search applications have the problem of fast browsing, the fragmented news is serious, and the way people get news is too messy, and there is no clear time to browse. More and more people are choosing to use bilibili or Tik Tok medium and long videos to fully understand the incident

USER INTERVIEW

Interview

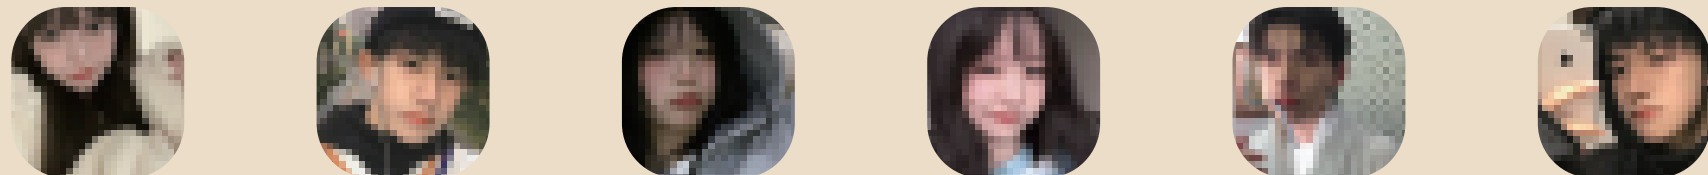

I interviewed 30 people from five age groups, and they all had a certain point of view about sports

Ages 0-18

People in this group are often students, so they are always obligatory to exercise in their daily lives, and they do not deliberately go to the gym or study sports. Not many people like to swim, but land swimming equipment is acceptable

Ages 18-24

This age group is college students, this kind of group began to pay attention to strengthen exercise, exercise is no longer mandatory, many students who like sports began to learn sports independently, not only to exercise to have a healthy body, but also to have a way to relieve the body and mind.

Ages 25-34

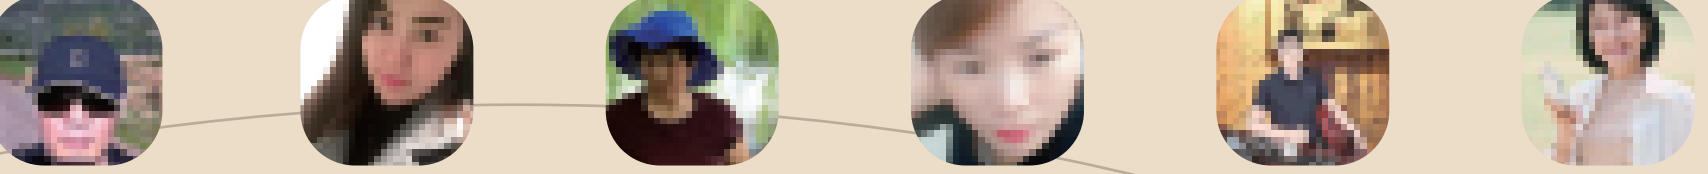

This group has already begun to work, all body functions are still within the controllable range, because of the need to go to work, so the time for exercise has decreased significantly, so at this stage people exercise more brisk walking and other ways to carry out simple exercise.

Ages 35-44

People in this age group already need to take care of the children at home, work into the daily life stage, and there are few opportunities to spend time on sports, so exercise is an occasional exercise for people at this stage.

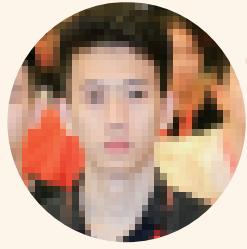

Ages 44+

People in this age group begin to decline in physical function, reduce the physical damage caused by exercise, and more often carry out small exercises and walks with mild and some fitness dances to achieve the effect of activity.

Persona

I surveyed people of different age groups online and offline, and chose two representative examples to show, which can understand people's needs and problems.

Dennis

- 19 years old
- student
- Curious about the news
- Get news at a fast pace

Demand: The complete story is no longer a one-sided news background.

Pain point: Without the ability to judge, it is easy to be ignored by one-sided news and ignore real events.

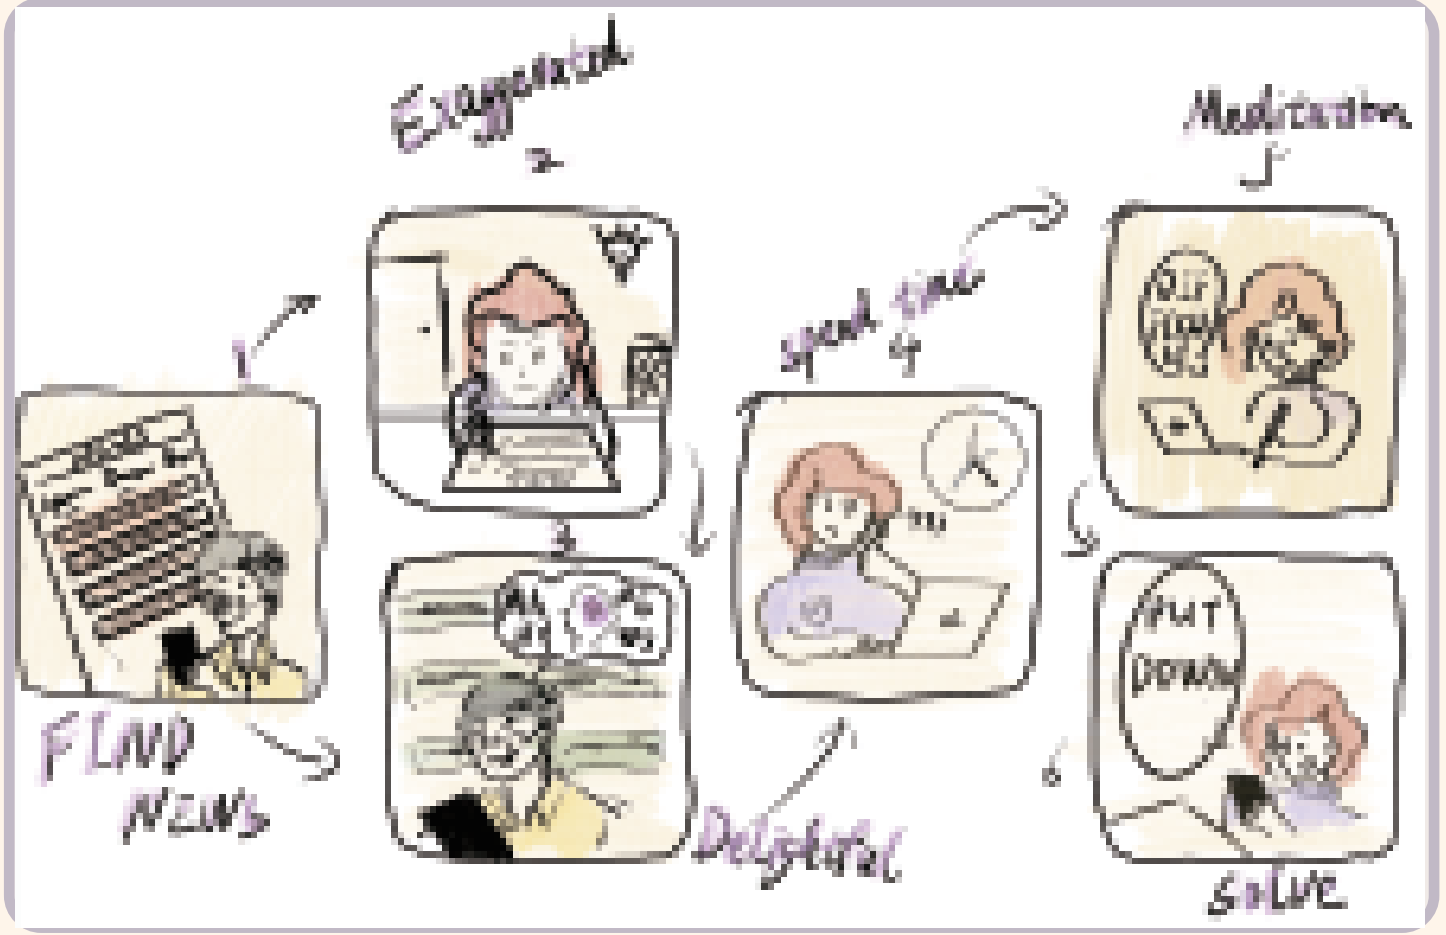

"It takes me a long time to sort through the complete news"

Demand: A complete news process is needed, and a clear future development direction is needed.

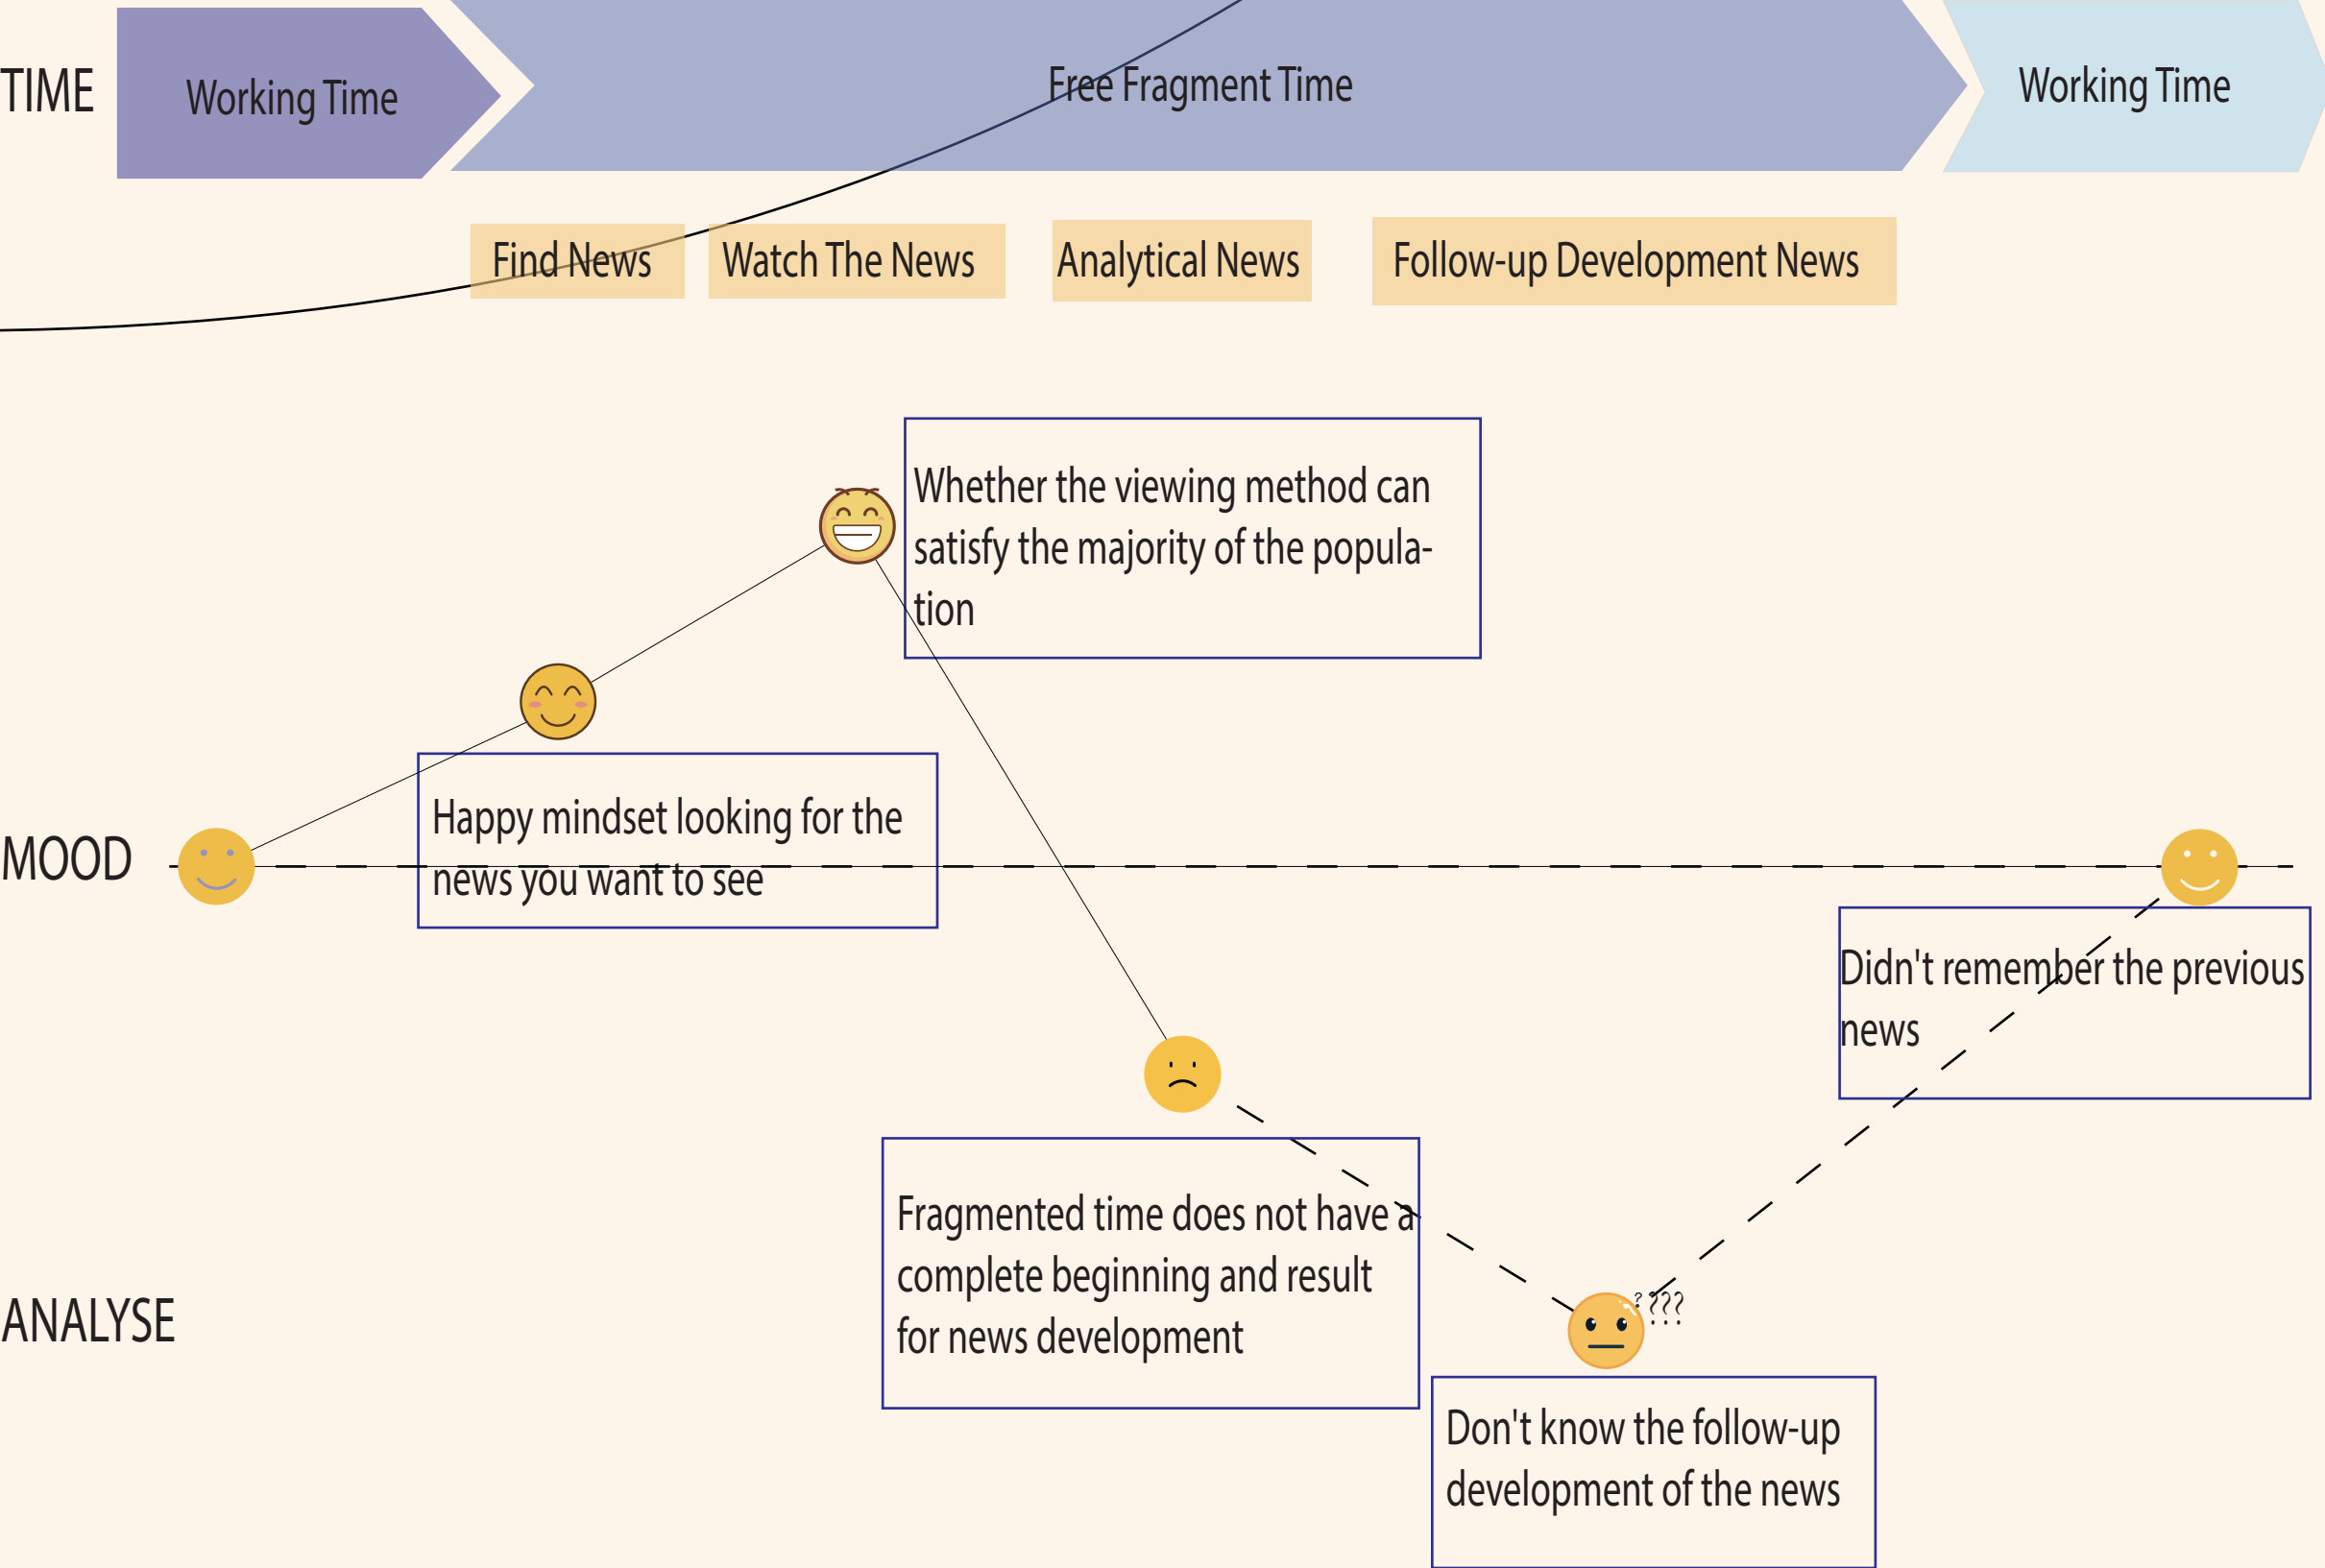

Pain point: There is too much news to deal with redundant news

Brocken

- 45 years old
- Freelancing
- Grasp the dynamics of the times through news
- Need to grasp the complete news

Journey Map

Summary

People like to quickly obtain information through **fragmented time**, but this has a big flaw, if the content that can be covered by the news is **one-sided**, the news content is **incomplete**, and the development of events before and after is incoherent.

Cultivate the ability and habit of in-depth reading

HMW

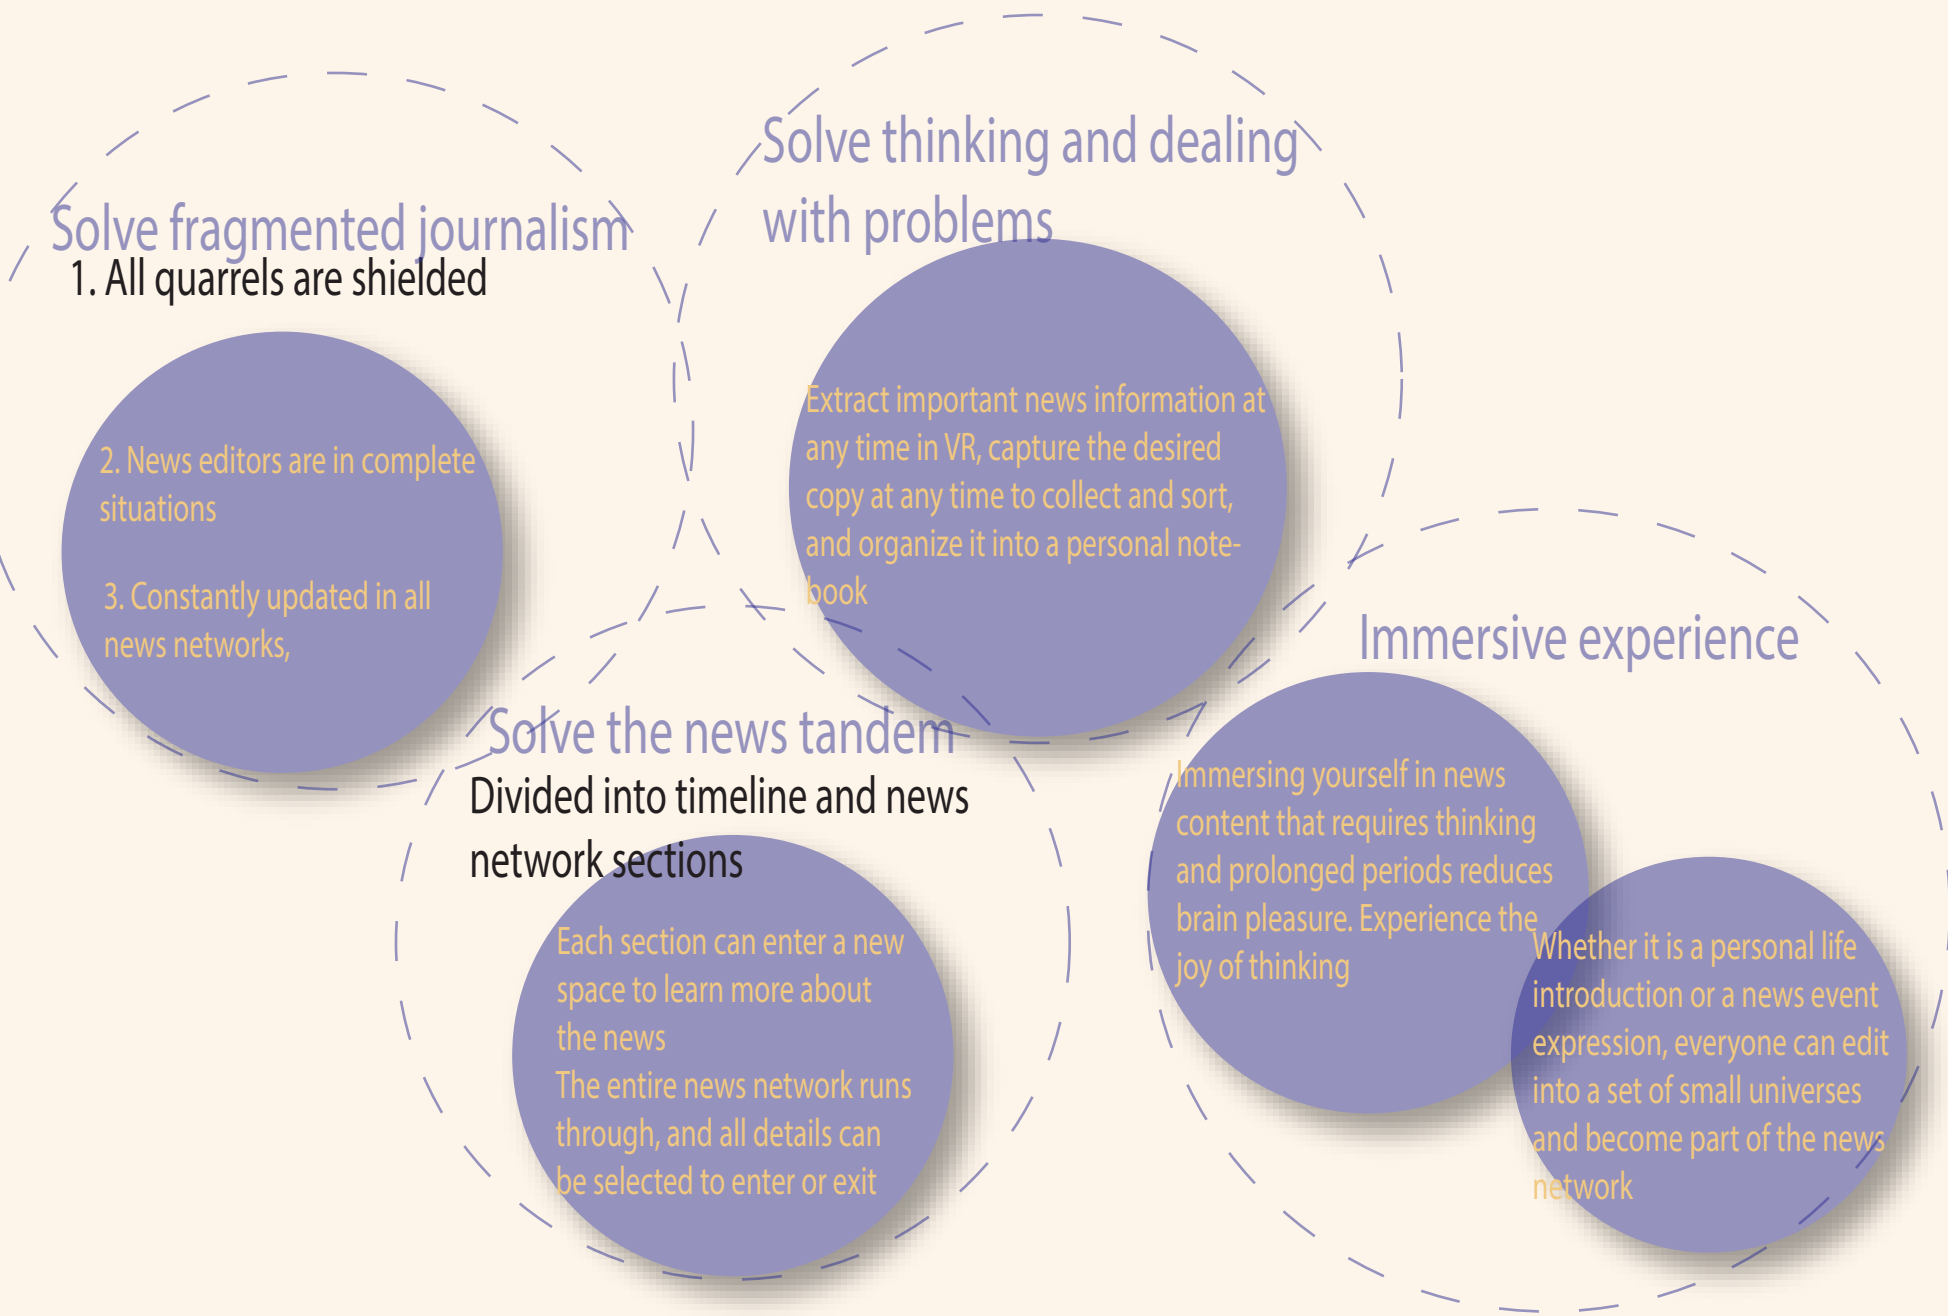

1.How might we
What can we do to reduce fragmented journalism?

2.How might we
Is there a way to connect the news so that all the information can be integrated?

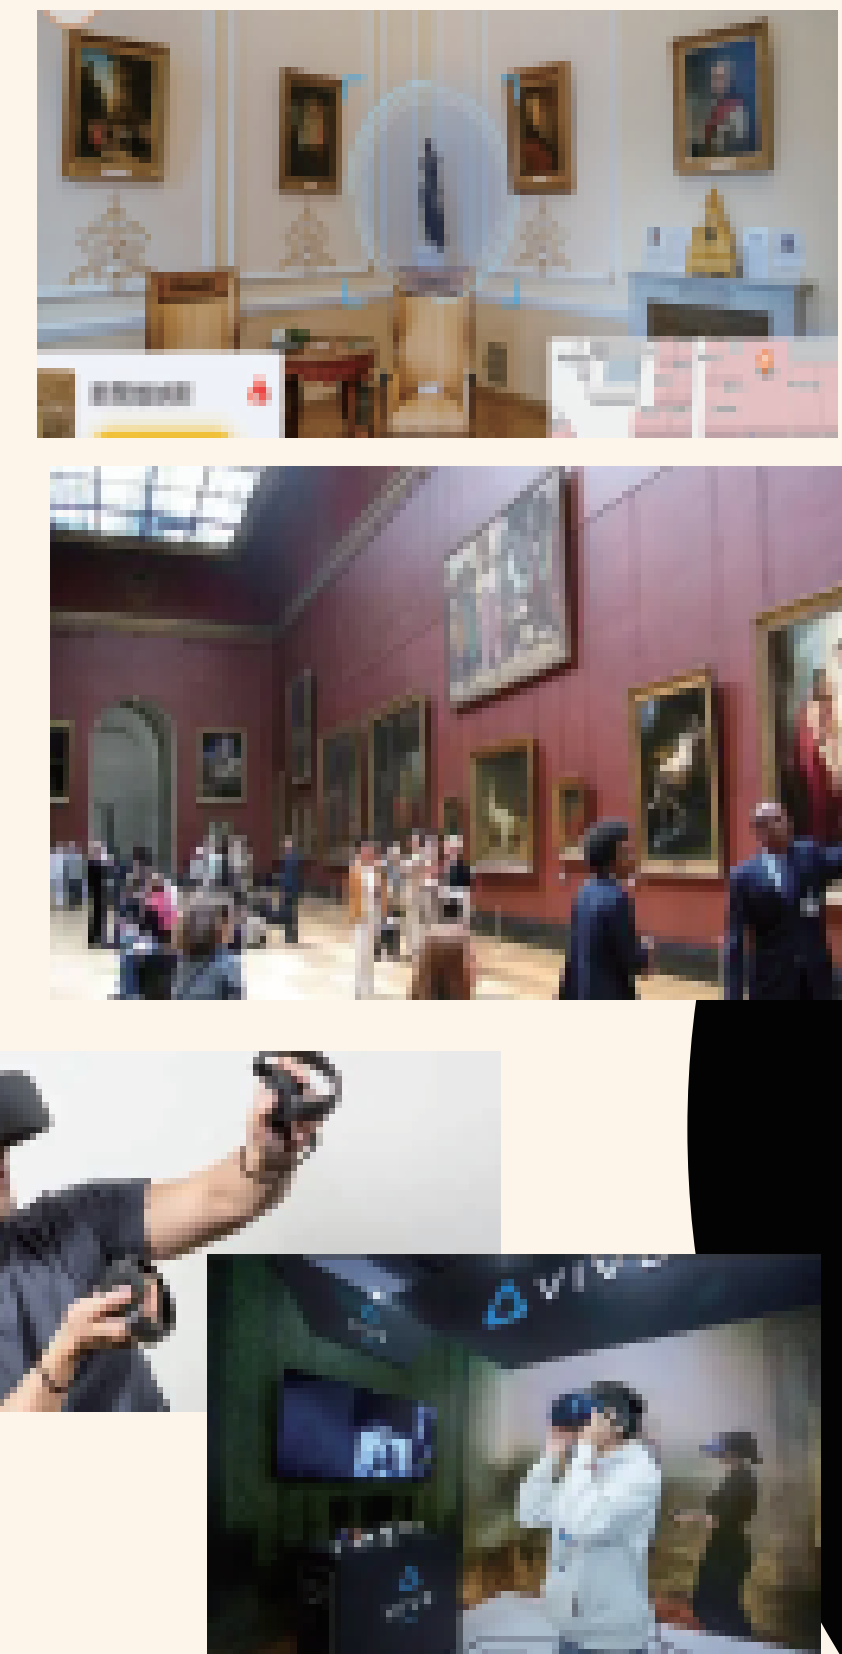

3.How might we
Can we take notes while browsing the news, have a personal understanding and processing of the news, and thus immerse ourselves in the stage of learning?

BrainStorm

I want to use VR as an immersive form so that people don't get disturbed by things from the outside world

Design Concept

WHO: Metaverse News

HOW:

- 1. Enter an immersive news experience with VR
- 2.Integrate and process news completely

WHAT:

Use VR to string fragmented content into threads. Users follow the museum process to fully understand the news content. A variety of content panels on the wall, integrated content for selection and viewing.

PURPOSE:

Let people fully understand the news and immerse themselves in the information. Calm down and immerse yourself in a period of learning.

Merit:

Immerse

National news

Full news storyline

Possible shortcomings:

It is not convenient to carry

There is a news lag

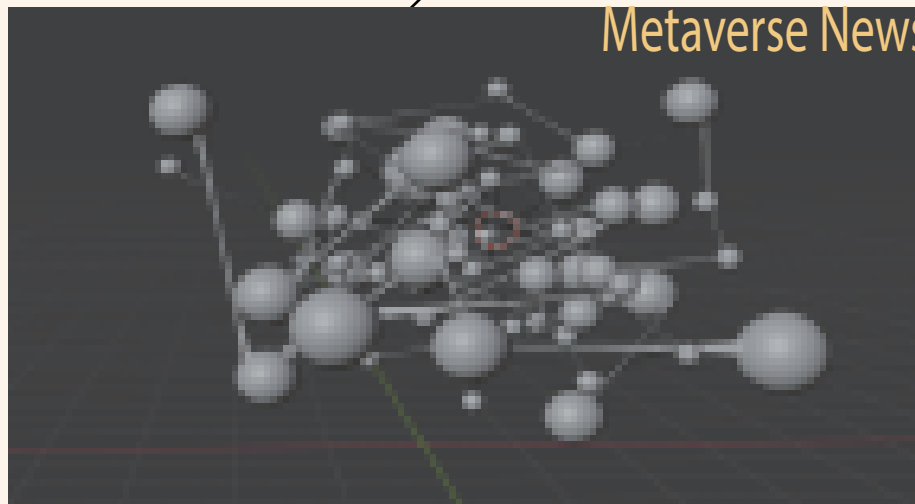

There is no comment system

● Information Diagram

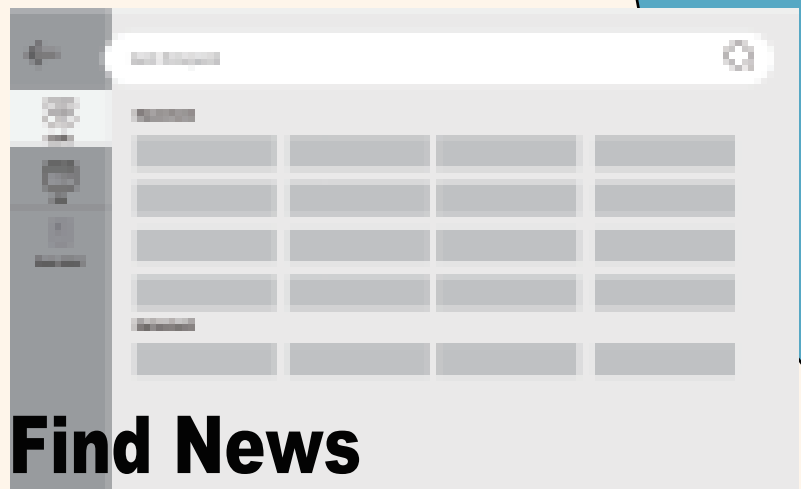

● VR Scene Interface

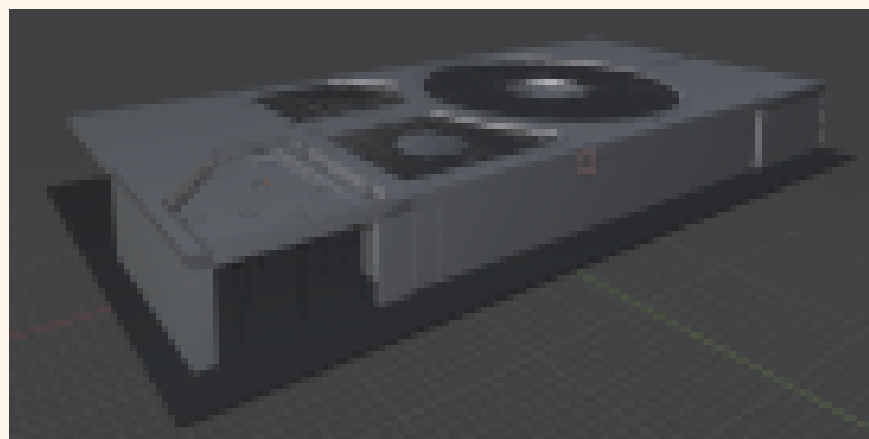

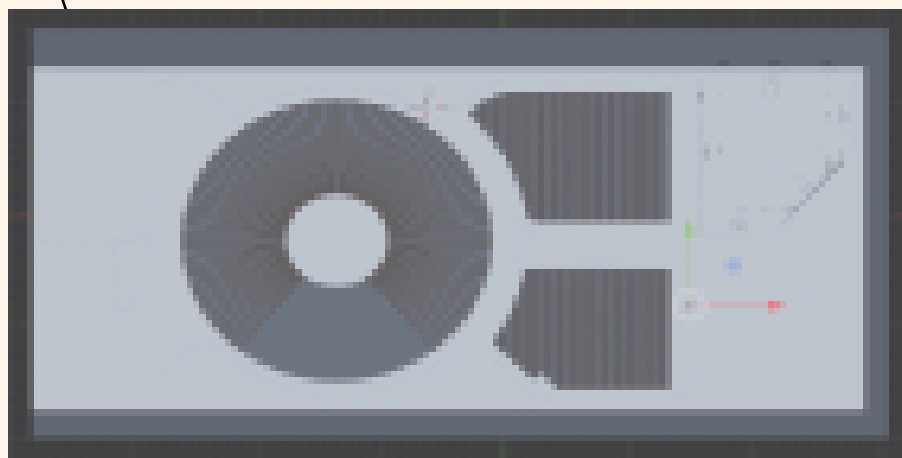

This is a draft of the metaverse of the entire VR news network, which is reflected in the connection between the news, and there will be enlarged animation changes when the news content is selected.

This is a sketch of the picking interface, and people can search for the news content they want to see by time, news content,

1

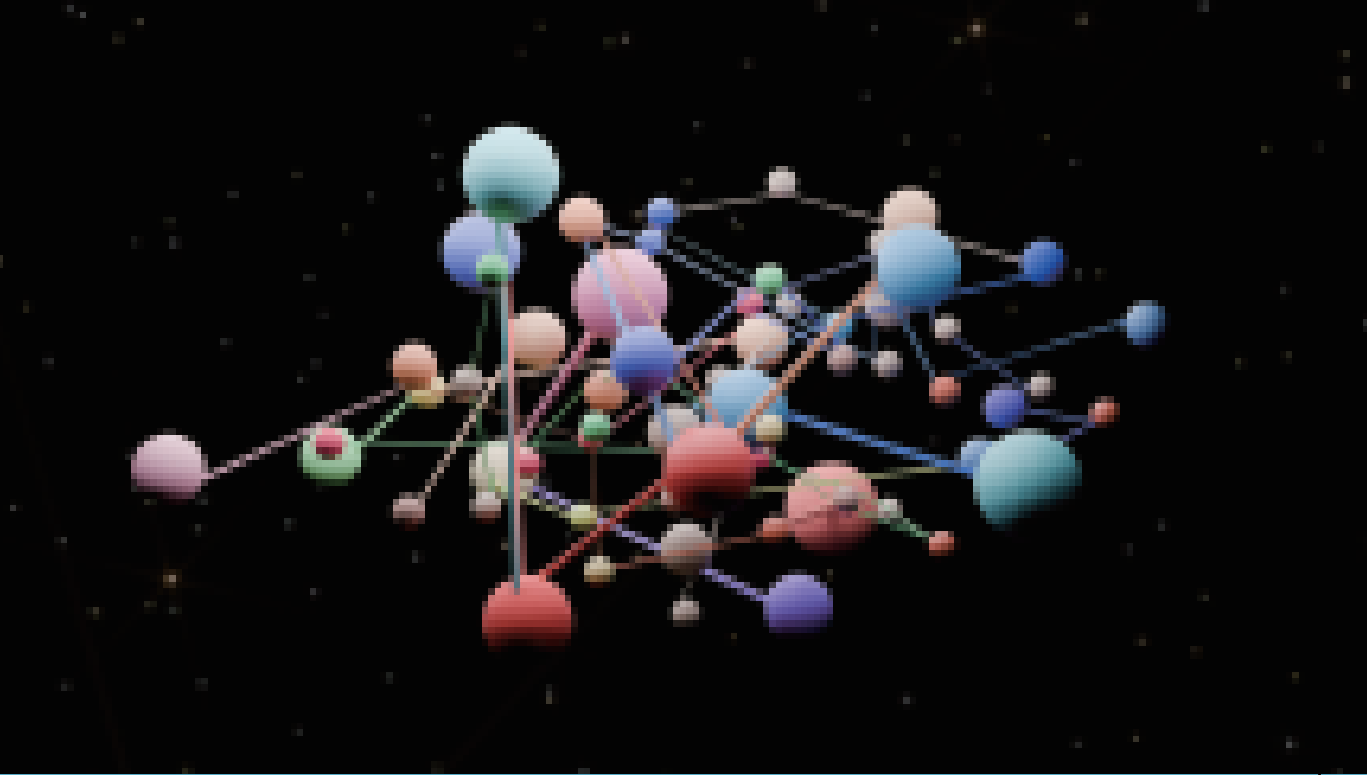

2

3

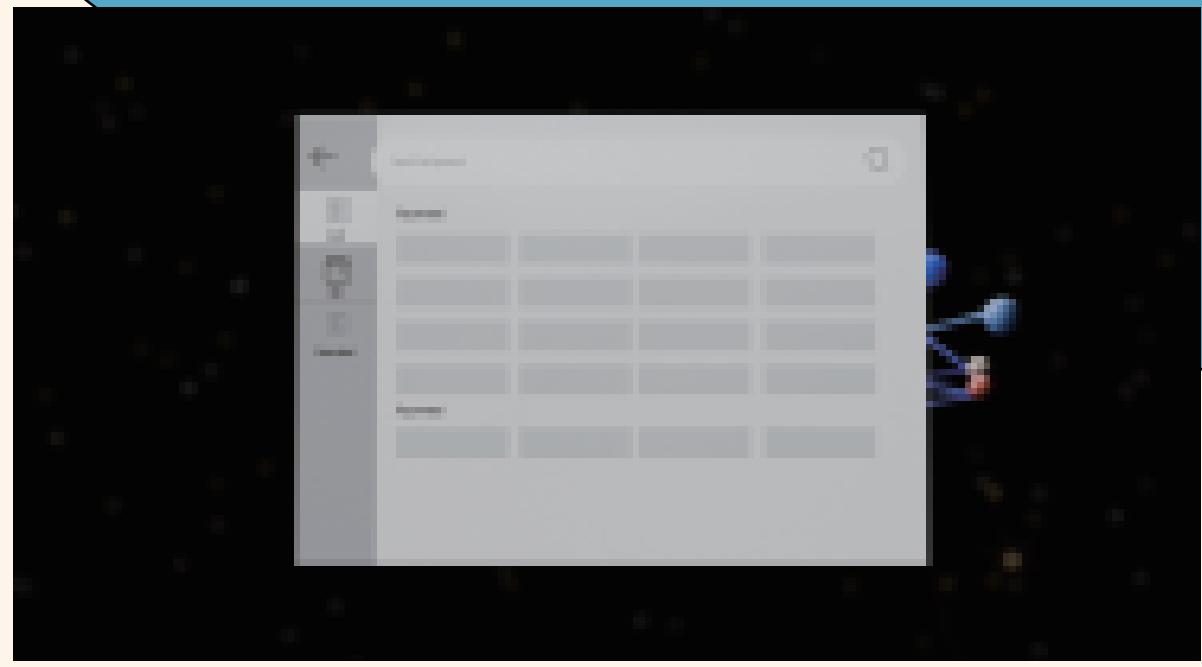

The sketch design of the VR news scene establishes a museum-like browsing process, which is more realistic and has a strong sense of experience. Immerse users in the real world.

Metaverse News

This is a rendering of the metaverse, with the starry sky as the background, fully demonstrating the **diversity of news**. Each sphere of the same color is a whole news relationship connection. People can independently choose which news system to enter to **view and think**. Reduce fragmented interruptions and enhance the understanding and integrity of every piece of news. Therefore, as the most **outstanding part** of the metaverse.

Find News

This is a pop-up of the pick screen, where people can **search for the news time, news** content, etc. It is a frame that pops up after the background is blurred, and people can **choose the news** headline they want to look for to view.

● **VR Version**

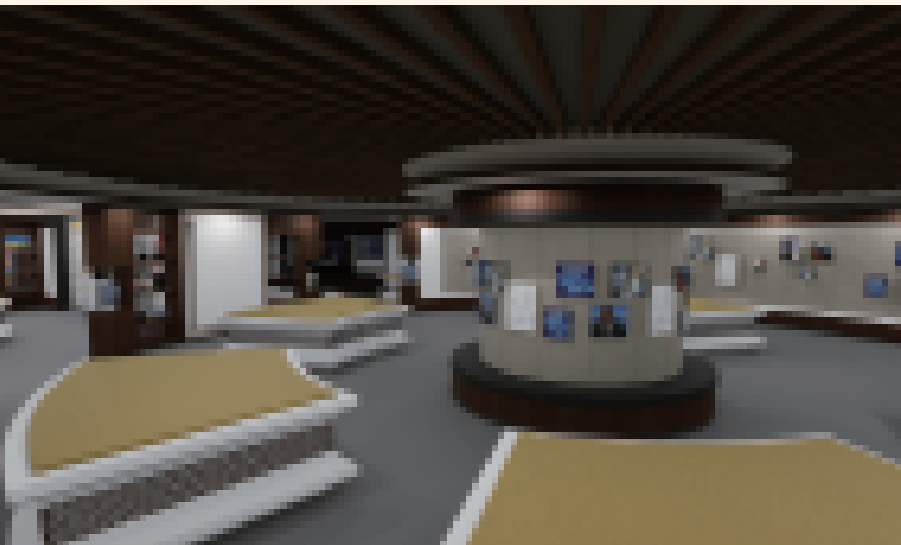

Here is the modeling scene inside the museum, and I used the development of the epidemic in the new museum as the **background to introduce** the news museum. There will be a general summary here, so that all users who want to know the news here can understand the content most directly. The entire news venue includes **photos, pictures, copywriting, videos.**

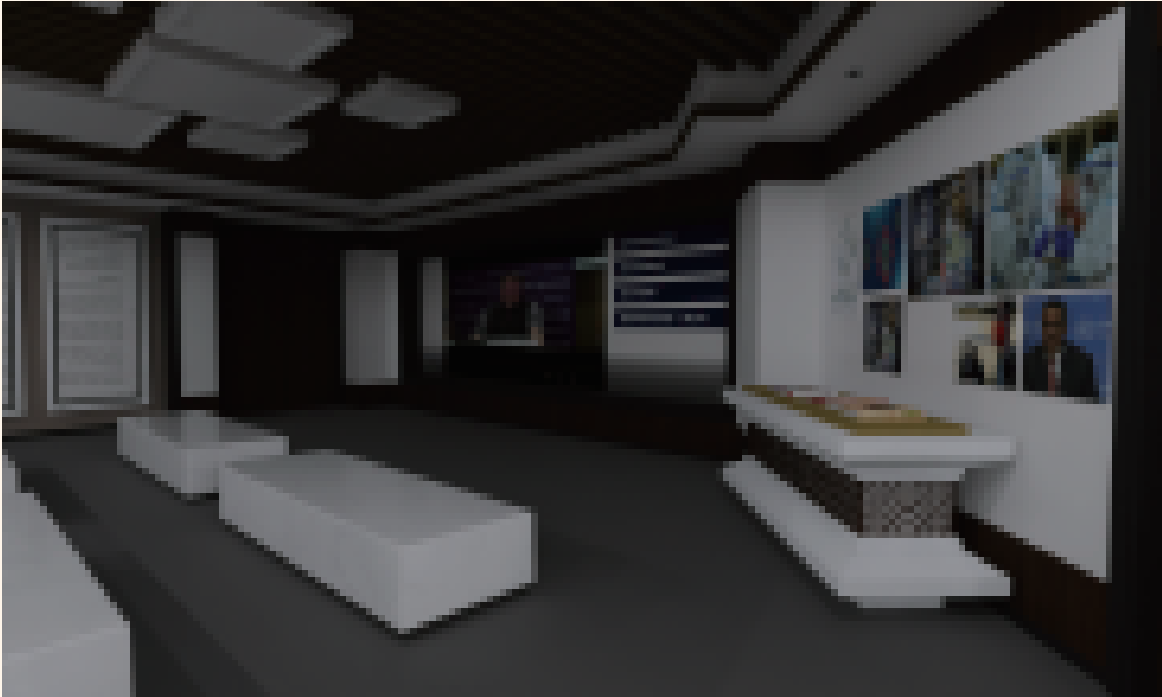

Here is a **timeline-based** news embodiment, and the timeline behind each photo can be entered, so as to enter the **next scene.** Through time analysis, more refined news content is analyzed. It can even be granular to the **daily news content.** As long as there is news about related expansions, it will be connected.

These venues are details in the museum, and people can see many **pictures and news** introductions from that time in chronological order, and the most outstanding part of the virus is that cannot be seen with the naked eye in reality, and can be observed **through physical observation.**

The news details of each piece can be carried out to enter a **new venue** again and start a new news reading. All news is no longer fragmented, but connected overall news.

The last part is the end of the museum with video, and people can **intuitively enter the viewing** mode, with **different scenes** to switch, and make more use of the immersive experience in **VR.** Increase people's thinking and stop simply checking the news at a **fast pace.** Video content can be experienced live.

Some newspapers can be read in the copywriting. People can leave a feeling after visiting.

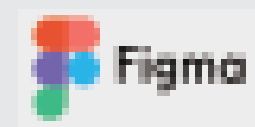

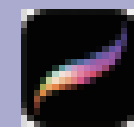

ONLINE

language

OVERVIEW:

This is an app that uses software to share life and alleviate verbal violence. Verbal violence can be seen everywhere and is not far away, except for some people who think they are strong in tolerance, most people believe that verbal violence will have a greater impact on real life. People always like to express their opinions and give constructive advice, but there are always some people who act as moral judges and attack sarcastic words mixed with a large number of their own opinions.

TOOL:

PROJECT DURATION: 2025.10---2025.11

Name: GUO YIBO

Social Platforms Are A High Inci- dence Of Online Language Exposure

BACKGROUND

01 Key Inspiration:

In today's reality, there are many social platforms that have become the place of high incidence of online language explosion. Due to the disagreement of netizens on some contro- versial topics, other netizens commented with overly slanderous words, and critically commented on strangers, which eventually caused irreparable harm. How to reduce the harm caused by online violence and allow people to share their lives freely.

Female Celebrities Suffer From Depression 1

She is a well-known female star, and due to the death of a loved one, she also had a great influence on her, so she did not audition successfully. The old company **demand huge compensation** to avoid slandering her inside and outside the industry, and because she didn't want to be evaluated as **"hype"** for illness and family reasons, she continued to be subjected to **online violence** and her own problems, and now she suffers from **severe mental illness** and cannot live independently.

2 Pink Haired Girl

The girl took the graduate admission notice to show her sick grandfather. **Some netizens** attacked her pink hair and **maliciously slandered** the girl. She couldn't stand **the online violence** and eventu- ally **committed suicide** and left the world.

The **daily life** shared in the past, because it was born out of **public issues**, caused **dissatisfaction** among netizens, and netizens moved out all the previous daily sharing and **slandered and abused**.

Fear Of Being Abused Online 3

Conclusion:

Online Violence Is Deeply Harmful.

Because the diseases caused by online violence are deeply harmful and affect people's normal lives, not only ordinary people, but even famous celebrities will still be maliciously slandered and speculated and commented.

02 Research: Humanities database survey data: a national survey of 3,591 respondents

I've researched a lot of data and found that online violence is a serious problem today. Due to the increasing number of online commenting methods, more and more tragic news is being generated.

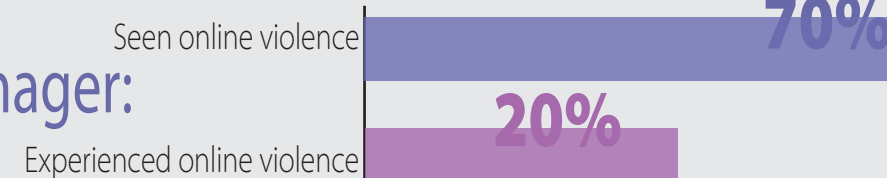

Claimed to have experienced online violence

Women are subjected to online violence

About teenager:

80% Psychological problems are severely affected

60% Anxious, depressed mood

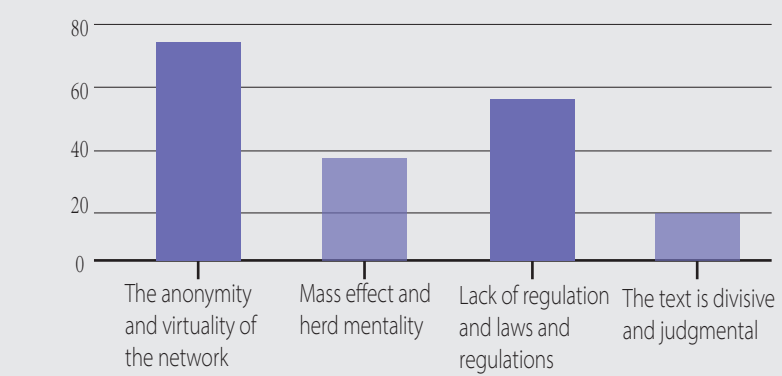

30% Affect normal life and study

EFFECT

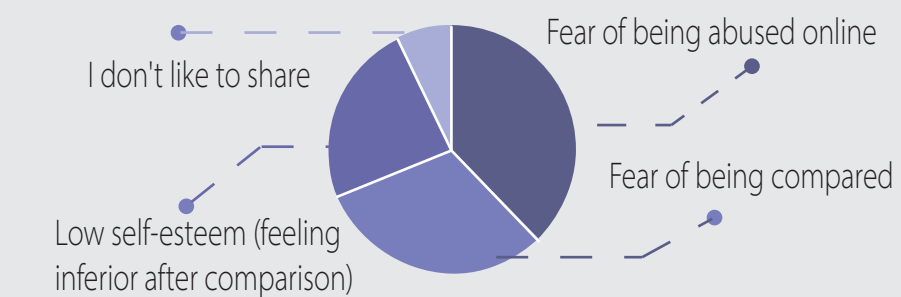

QUESTIONNAIRE INVESTIGATION

User Requirements:

The main causes of online violence

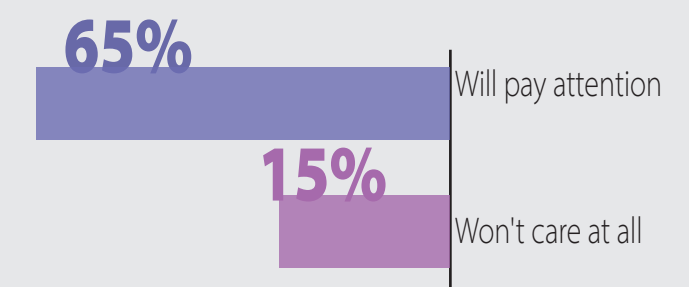

Why don't you like sharing your life on a public network?

Willingness to share life online (photos, life information)

	MAN	WOMAN
Willing to share life online	10%	30%
Reluctance to share life online	25%	60%
It doesn't matter if you want or not	65%	10%

Will you pay attention to what you say on the Internet?

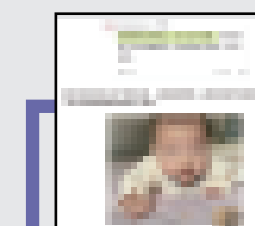

- The dangers of **online violence** are enormous

- The main reason for the **reluctance** to share life is the fear of being **abused online**

- Online **disputes** often arise on **text**-based communication platforms

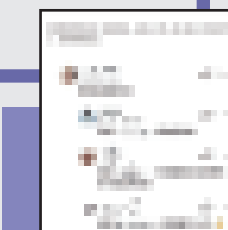

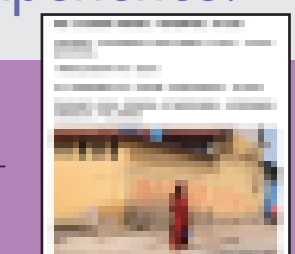

- Most people pay attention to their words and actions in the web

What is it that affects our online experience?

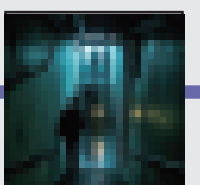

People share that their children are scolded for "showing their babies".

Share your outfit today and be deni- grated

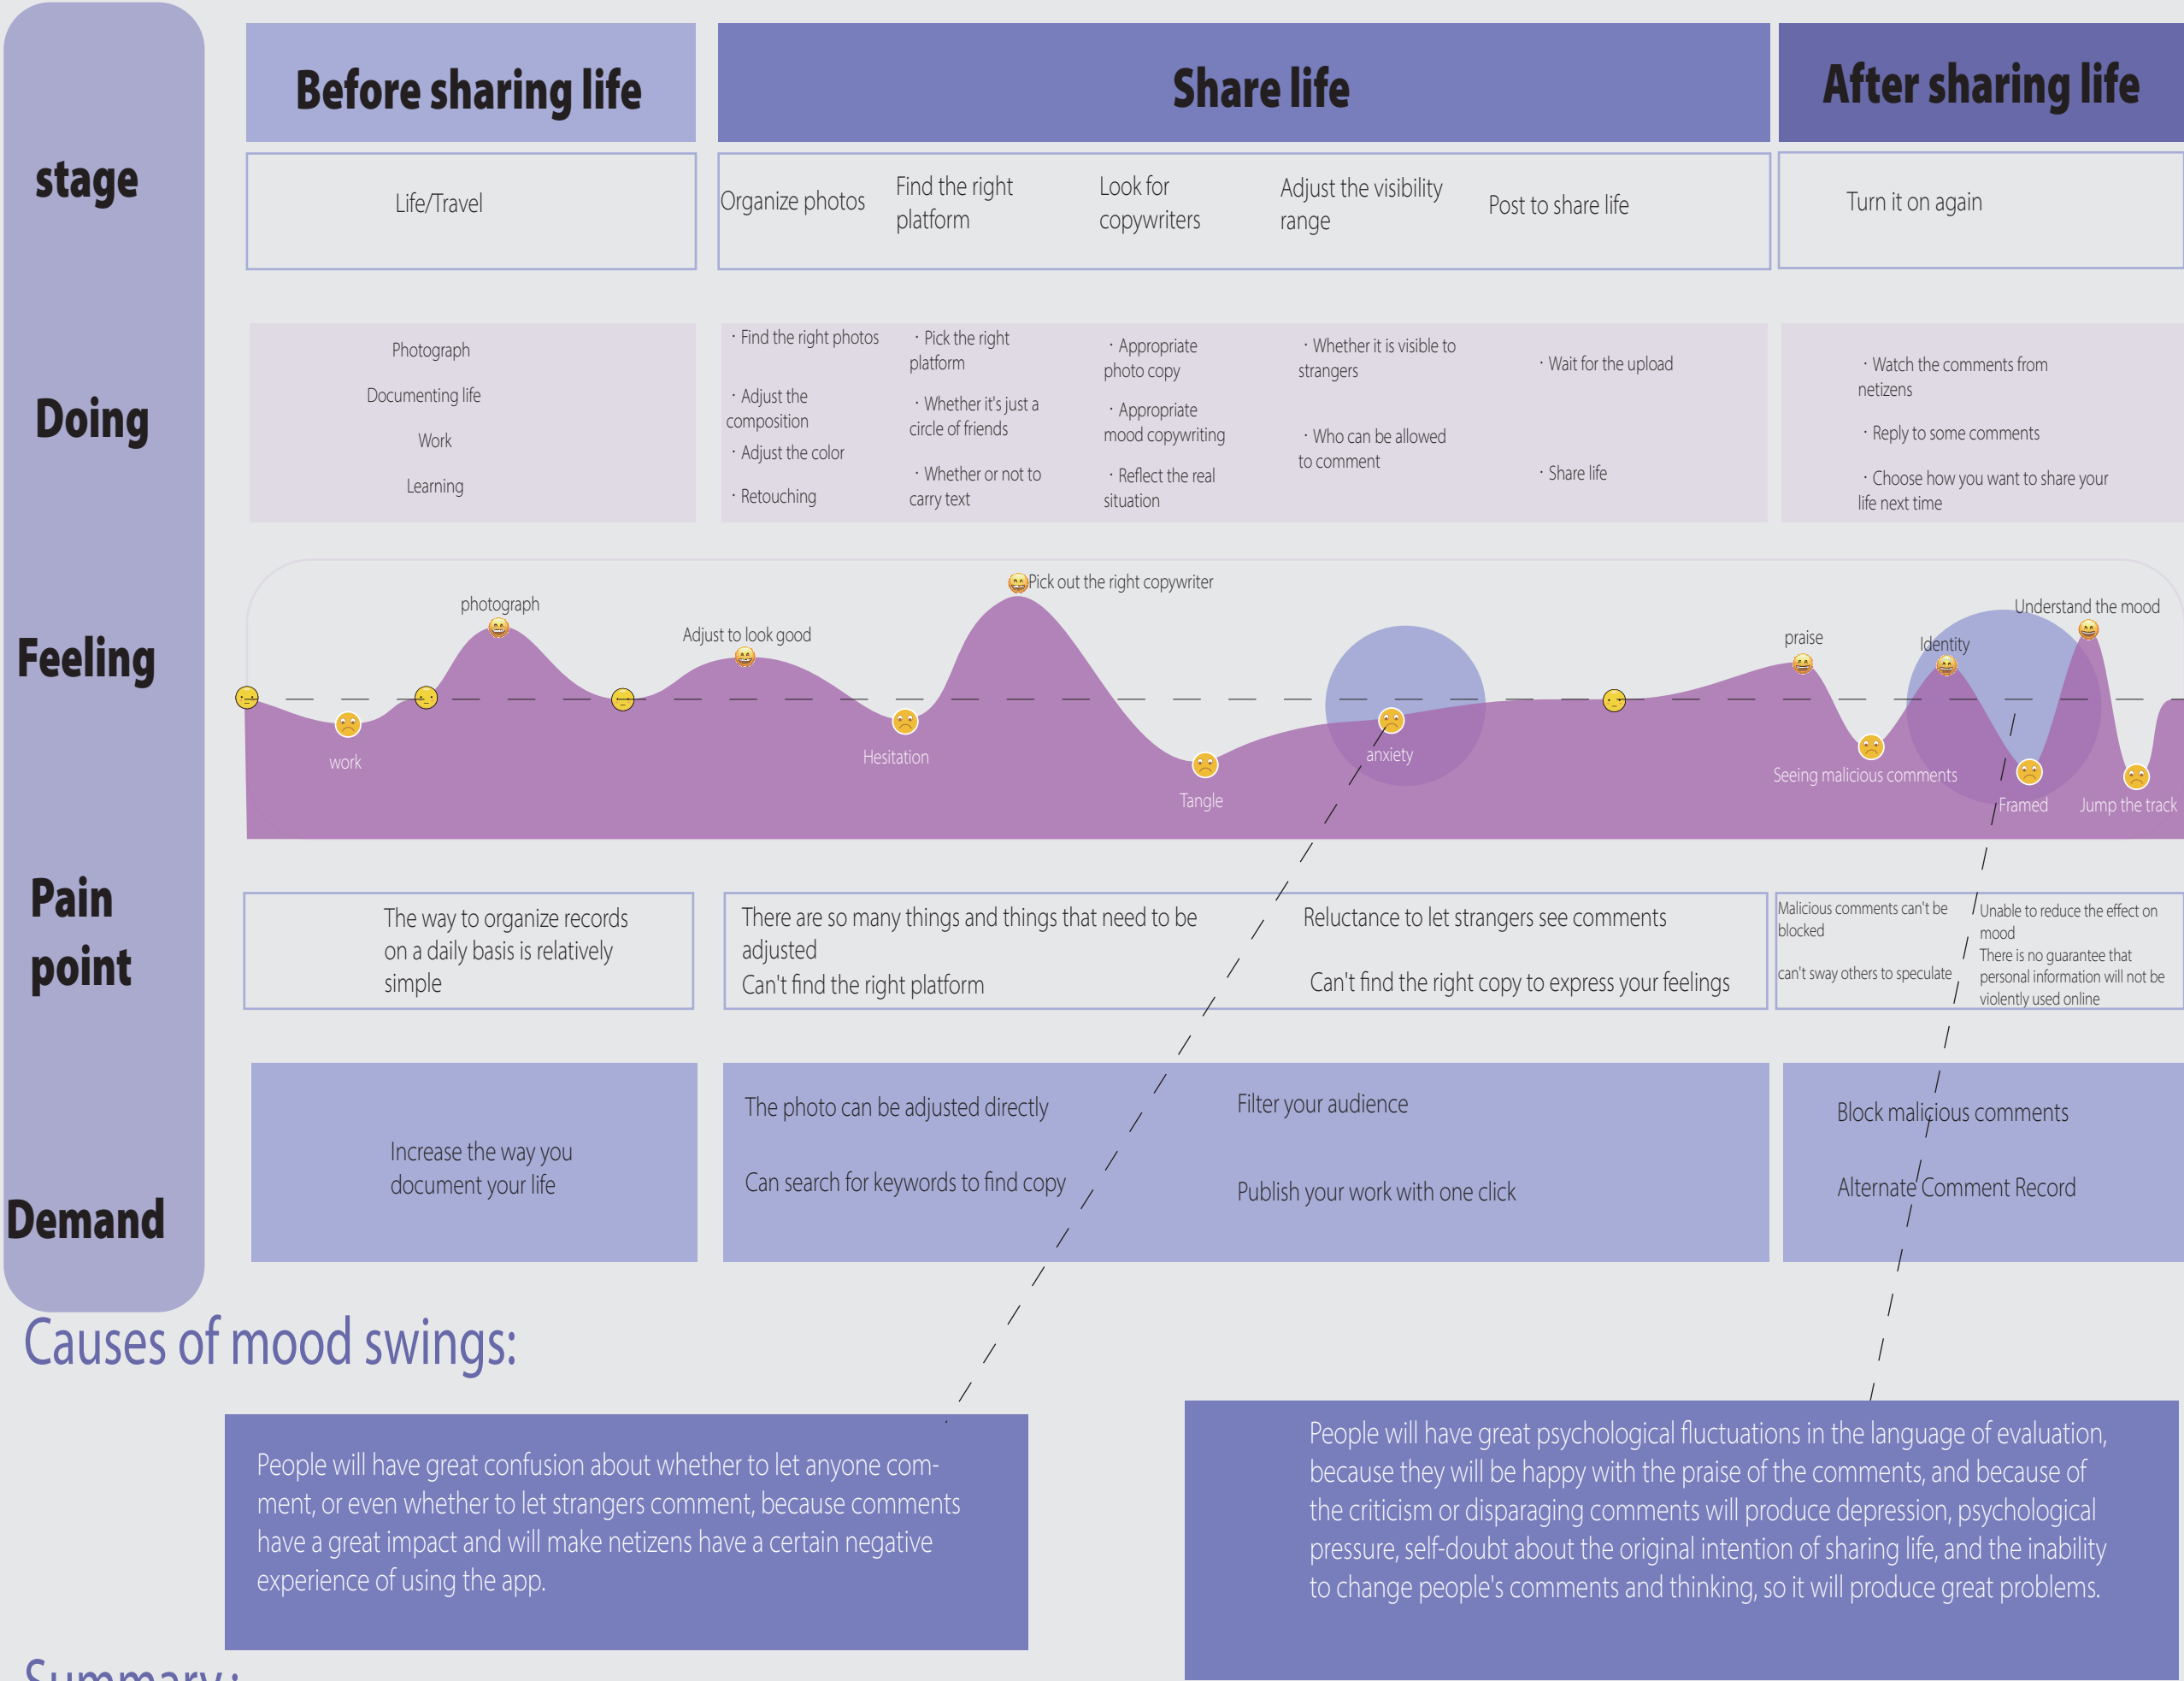

Some comments on controversial topics are tagged

Slander, a social problem that arises as a result of false accusations

USER JOURNEY MAP

Causes of mood swings:

People will have great confusion about whether to let anyone comment, or even whether to let strangers comment, because comments have a great impact and will make netizens have a certain negative experience of using the app.

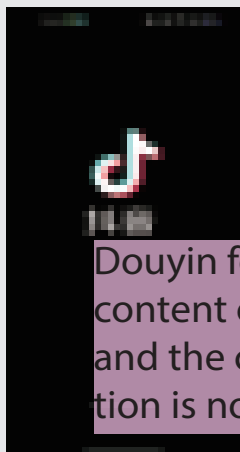

People will have great psychological fluctuations in the language of evaluation, because they will be happy with the praise of the comments, and because of the criticism or disparaging comments will produce depression, psychological pressure, self-doubt about the original intention of sharing life, and the inability to change people's comments and thinking, so it will produce great problems.

Summary:

Is there an app model, which can not only share life well, but also reduce the pressure brought by comments, so that the reason for comments is no longer to affect people's lives in a stressful way.

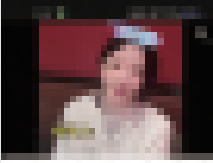

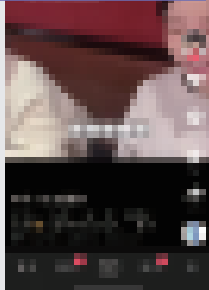

RESEARCH

I find that the above problems occur broadly on text-based platforms, but they are mitigated on video-oriented platforms such as Douyin, which may have something to do with the platform's mechanics.

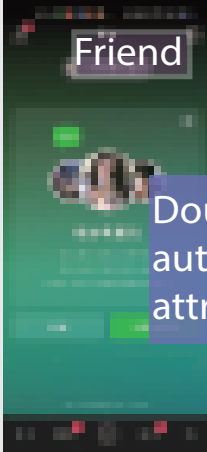

Douyin focuses on the content of the video, and the comment section is not important

Douyin weakens the text and strengthens the sensory stimulation

The comment section is very important, and there is even a control comment function

Douyin has authentic social attributes

Discuss why disputes arise

Words Are Directive

Because there is textual content, opinions will arise, and since each person's upbringing is different, opinions will be different, so there will be arguments. When argumentative figures become sensitive, online violence grows. (Stars, Stars, Politics).

Words Are Scrutinizing

Channeling vanity
Elegant quality of life, exaggerated praise, for the sake of virtual comments, to exaggerate, into the circle of vanity

Web Reviews
Online comments are mixed, and words of praise and disparagement can impact people's spirits and cause harm

Scrutiny
People will look at what is right and wrong from their own perspective, and everyone will blame others with their own standards

Whether painting is feasible or not

Painting releases stress.

Painting is a means of expressing emotions.

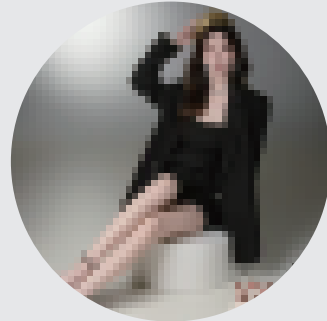

Paintings have a recording function.

HOW MIGHT WE

Whether it is possible to create an online environment dominated by images and paintings, so that people can share their lives and experiences without fear?

USER INTERVIEWS

Interview people's attitudes towards painting?

An YuFei
Age:32

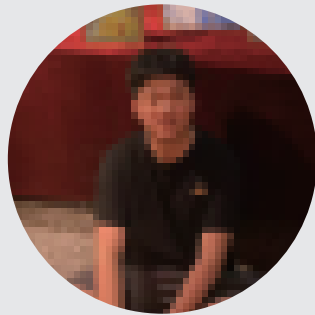

Q:Why people find it hard to start drawing?

Q:People make painting results a way to become famous?

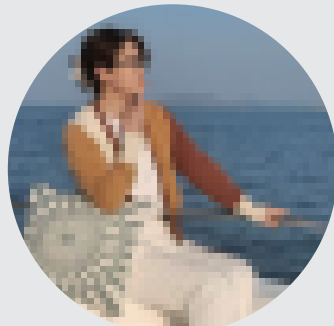

In my opinion, drawing is a very difficult thing to start because drawing requires a complete set of tools and ideas, which is a very difficult thing for people who have not really learned to draw. And I wanted my drawings to look my age, and I wanted something mature rather than a child's drawing. So it was hard for me to start drawing. And some people want to be famous with their paintings, but I can't do that high.

Q:Once people feel that they are not good at drawing, they stop drawing?

Cui Zao Feng
Age:23

Painting is a very difficult thing for me to do, when my picture is not good-looking, and I feel that I can't draw, I will put down painting, because I think that painting is to relax my mind and relieve stress, but if I don't draw well, it will make me stressed, so I will give up after I think I can't draw. Find other ways to relieve stress.

Li ChunXia
Age:48

Q:People always feel that drawing is a thing that needs to be exported?

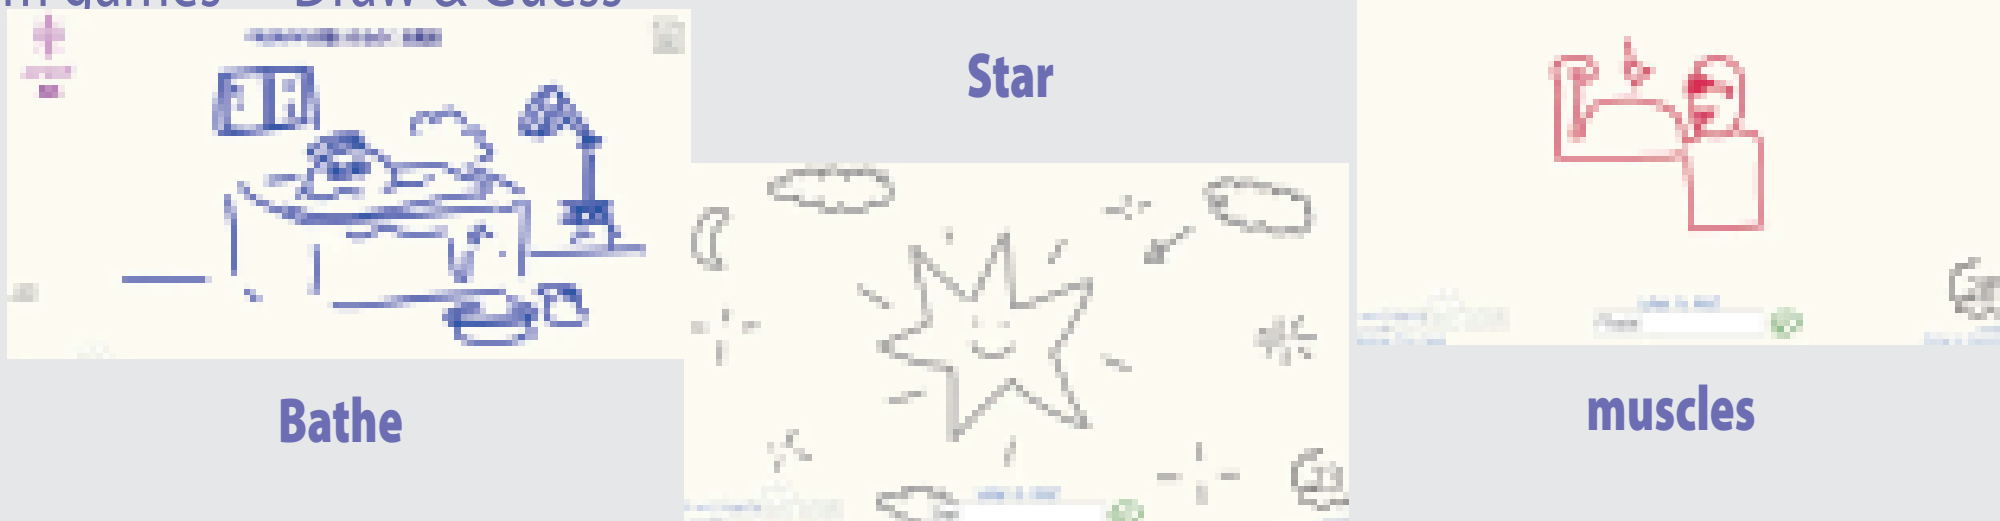

In my opinion, I paint just to have some results, even if it's just for me to see. When I spend time and effort on the matter of painting, I need some picture results to form a presentation of the result of my matter, so in my opinion, if there is no picture result, there is no point in painting, and time and mind are wasted.

Conclusion

- Some people are afraid that they will not be able to draw well, and the consciousness of obsessive-compulsive disorder makes people reluctant to start drawing.
- Some people only pursue the result of painting, and they lose the pleasure of painting because they are too utilitarian.
- People don't want to practice and draw patiently, so they start to give up when they find that they are not good at it.
- People always want to get some export results for the purpose of it, but in fact, some "imperfect" paintings are more charming.

INSPIRED

Steam games 《Draw & Guess》

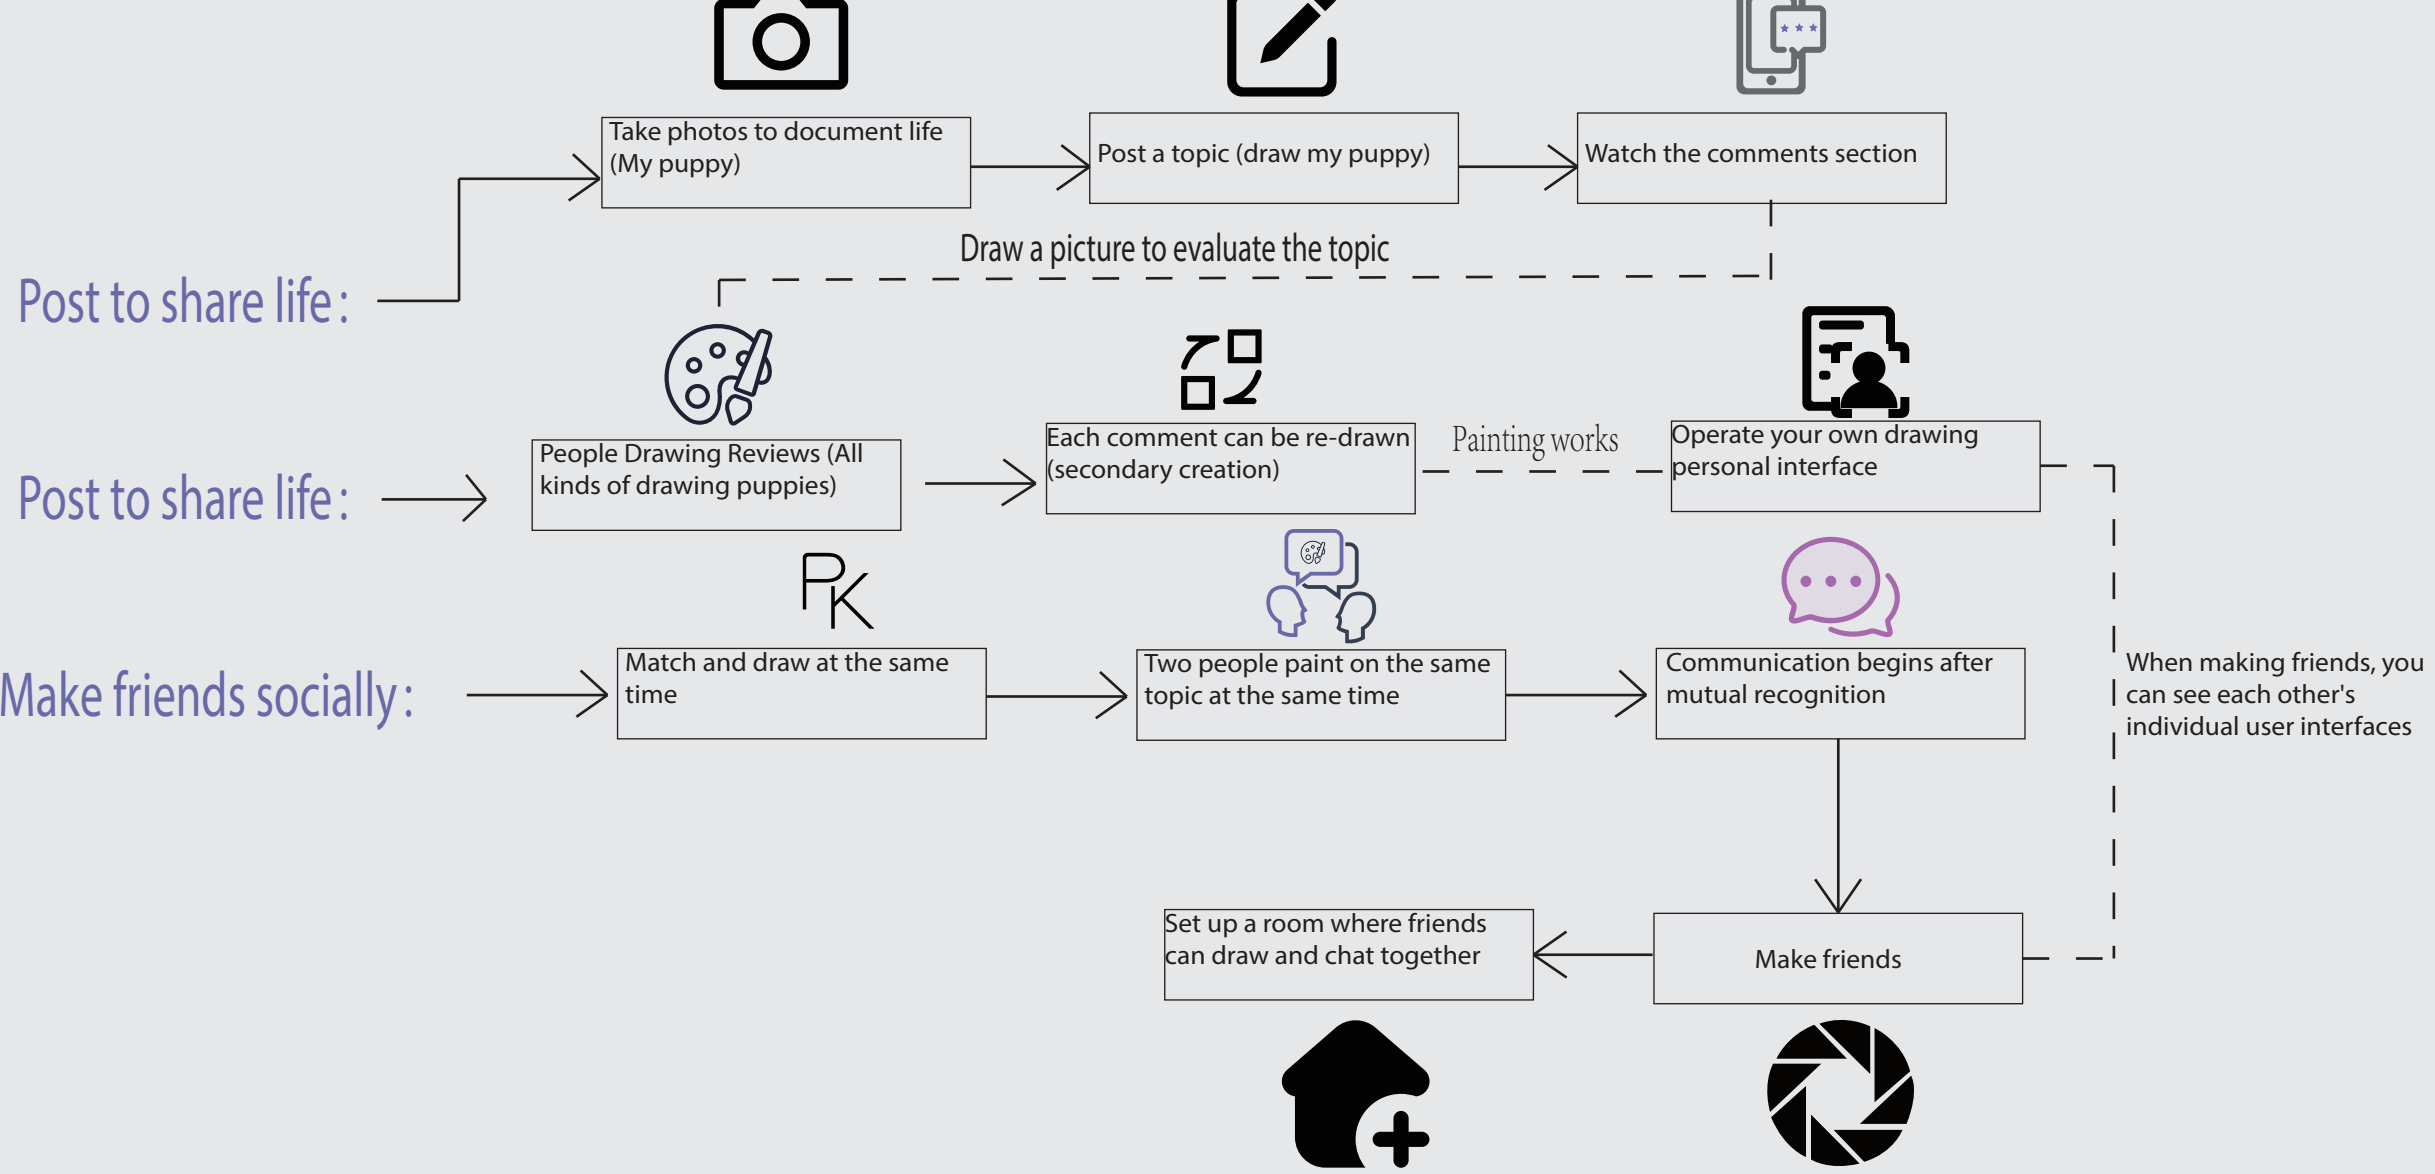

Choose **Chinese Whisper mode** (4-16 people) or choose the word guessing contest to draw and let other players guess the vocabulary as quickly as possible. The next player guesses the word the drawing wants to represent. Then another person draws it again. Continuing the cycle, **if the last player guesses the first word** correctly, there is a trophy. After three rounds, the player with the most trophies wins. It's really not the game's greatest pleasure, and **you'll soon notice that your elaborate** drawings are completely misunderstood.

- People who are not results-oriented and who can't draw can also participate, and even have better results.

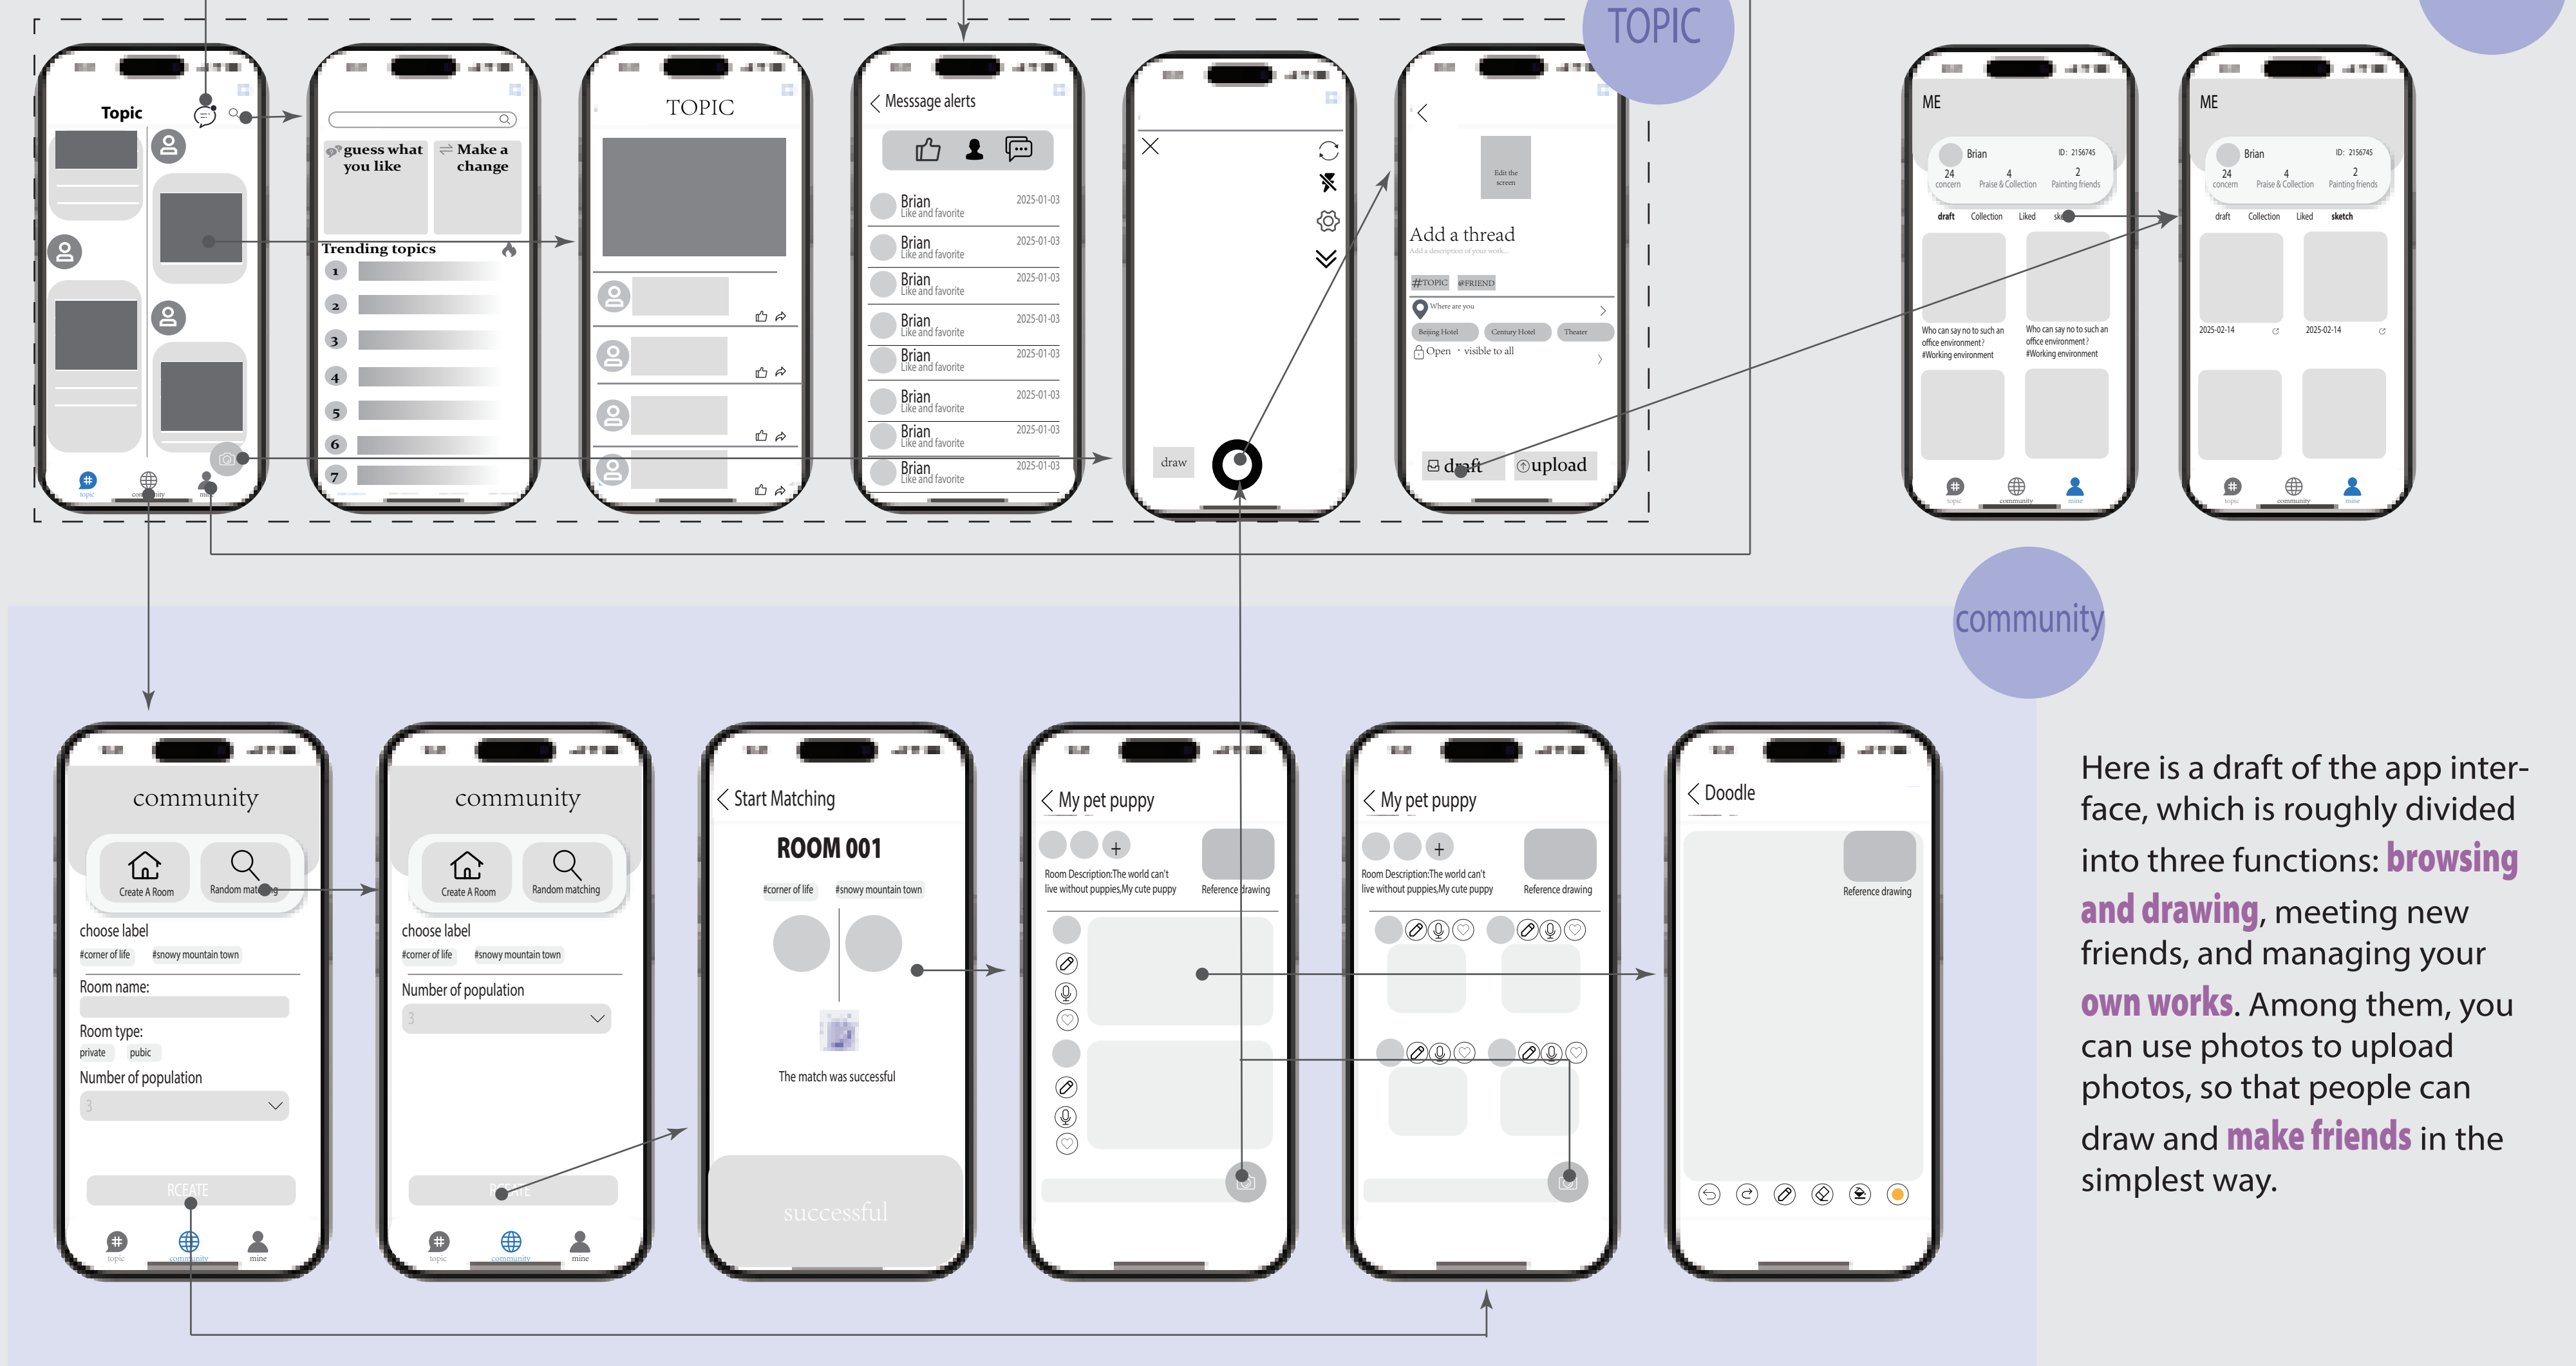

design concept

I want to create a social platform where people can have fun and relax through the means of painting, where you don't need to think about the level of painting, you just need to enjoy the process of painting and communicating.

DESIGN PROCESS

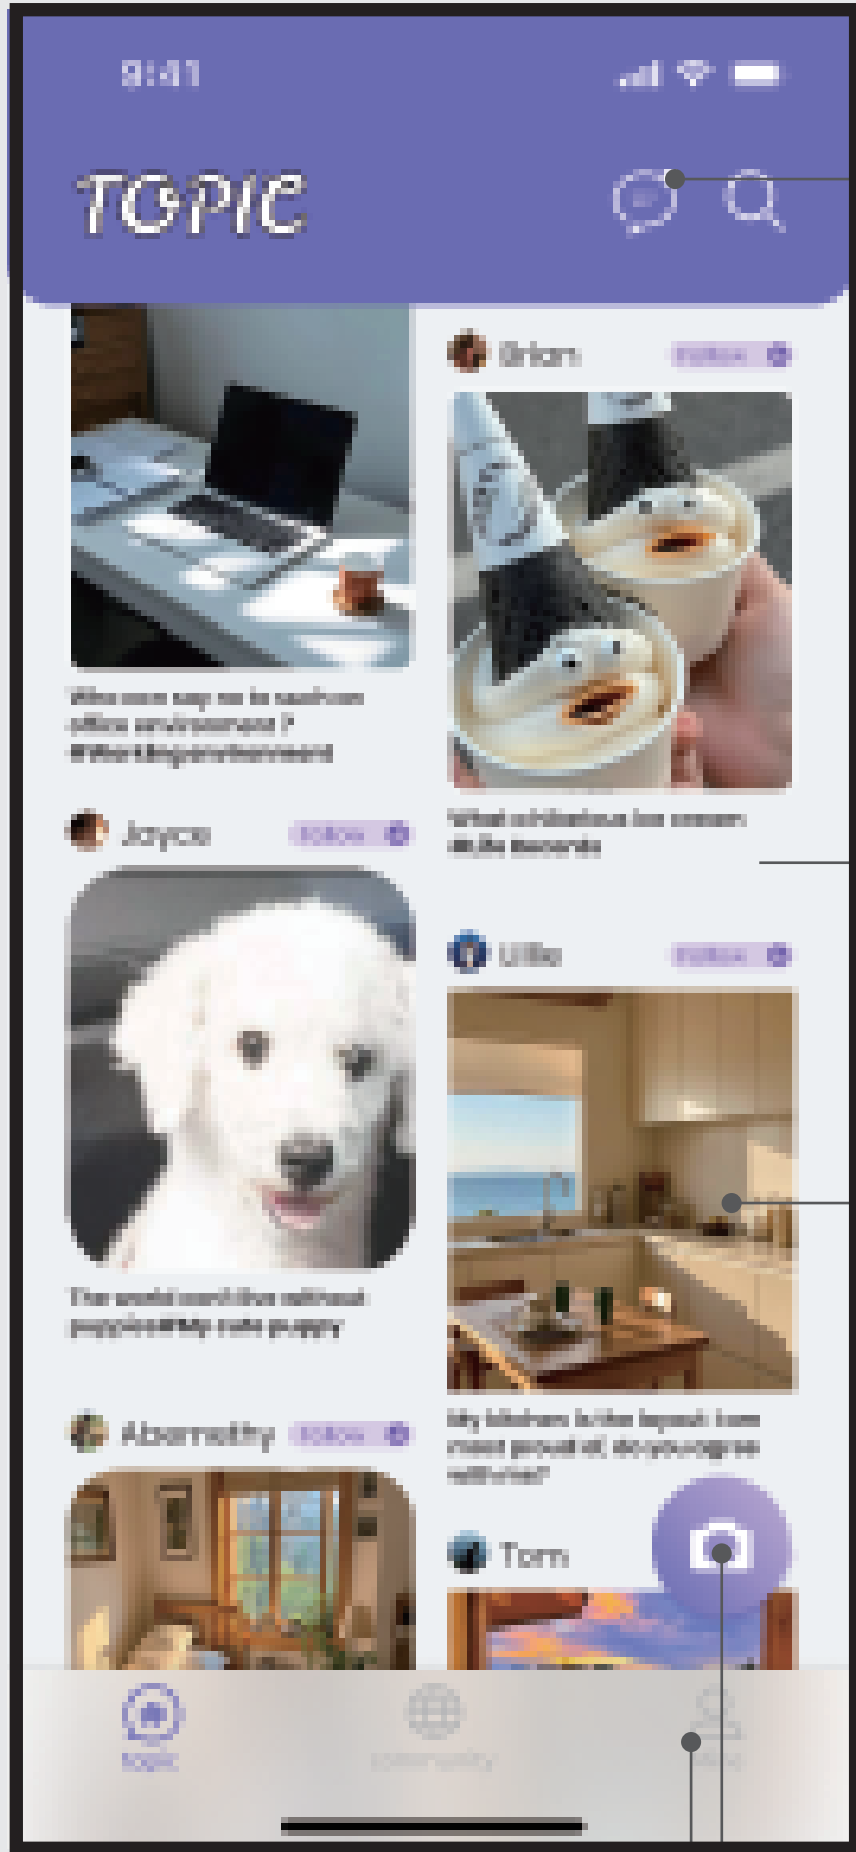

· Wireframe

Here is a draft of the app interface, which is roughly divided into three functions: **browsing and drawing**, meeting new friends, and managing your **own works**. Among them, you can use photos to upload photos, so that people can draw and **make friends** in the simplest way.

About the app

Try OnlinePicture to record life and express it in a drawing way to reduce the harm caused by verbal violence

This is an app that uses software to share life and alleviate verbal violence. Verbal violence can be seen everywhere and is not far away, except for some people who think they are strong in tolerance, most people believe that verbal violence will have a greater impact on real life. People always like to express their opinions and give constructive advice, but there are always some people who act as moral judges and attack sarcastic words mixed with a large number of their own opinions.

YouTube: <https://youtu.be/i2w2JLN6oJ0>

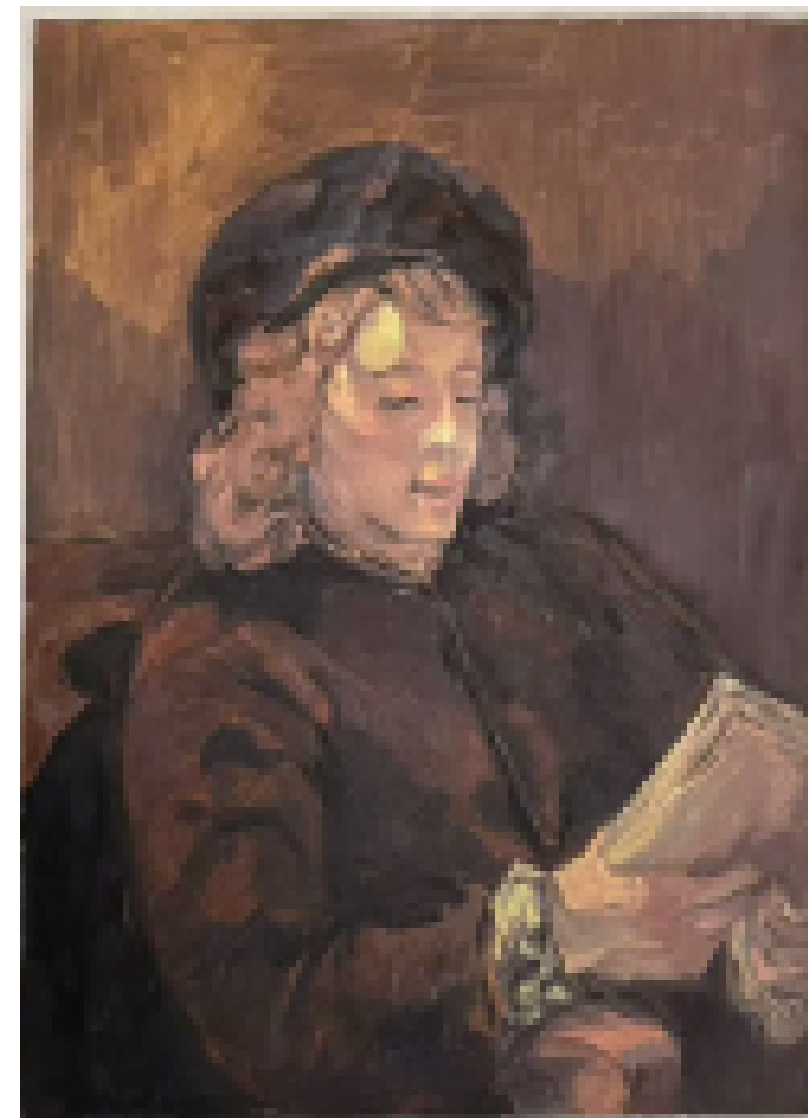

Oil Painting:

These are all oil paintings I painted during my college years, the most outstanding of which are the two on the left, one of which is a study of the famous oil painting abstract master Jackson Pollock, with its unique way of dripping painting, has completely overturned the traditional painting concept, led the trend of modern painting. Jackson Pollock, with its unique way of dripping painting, has completely overturned the traditional painting concept, led the trend of modern painting.

The second article was written while traveling to a city in southern China. It is mainly based on landscape paintings. Creation time: About five months to repeatedly revise the creation. People like to be close to nature, so the main color is green, and he has participated in the art exhibition of the provincial capital and has been rated as "Excellent Painting of the Youth Group Oil Painting Association"

The parts here are oil paintings of different stages, many of which have participated in competitions, and the approximate creation time of each painting is about three months. There are many details in the picture.

The works include figures, landscapes, solid ornaments, animal depictions, flowers, etc. Create with different painting styles. Try to use and distinguish colors in many different aspects to improve the level of oil painting. I can clearly see the progress of oil painting techniques during my university years, so each painting is carefully preserved, which is my time and hard work. I like to record life in different ways, because I think that painting is not just a way of expression. Therefore, during my internship, I am also willing to teach children to rely on their own key to create. It's not just limited to teacher templates. It is this way of thinking that allows me to discover a lot of beauty in life

Daily practice:
